**The Networked**

**Image in Post-Digital Culture** Andrew Dewdney, Katrina Sluis, 2022-07-12 This collection examines how the networked image establishes new social practices for the user and presents new challenges for cultural practitioners engaged in making, curating, teaching, exhibiting, archiving and preserving born digital objects. The mode of vision and imaging established through photography over the previous two centuries has and continues to be radically reconfigured by a hybrid of algorithms computing programmed capture and display devices and an array of online platforms. The image under these new conditions is filtered, fluid, fleeting, permeable, mobile and distributed and is changing our ways of seeing. The chapters in this volume are the outcome of research conducted at the Centre for the Study of the Networked Image (CSNI) and its collaboration with The Photographers' Gallery over the last ten years. The book's contributors investigate radical changes in the meanings and values of hybridised media in socio-technical networks and speak to the creeping automation of culture through applications of AI, social media platforms and the financialisation of data. This interdisciplinary collection draws upon media and cultural studies, art history, art practice, photographic theory, user design, animation, museology and computer science as a way of making sense of the specific cultural consequences of the rapid succession of changes in image technologies and to bring the story up to date. It will be of particular interest to scholars and students of visual culture, media studies and photography.

*Human Machine Interaction* Denis Lalanne, Juerg Kohlas, 2009-03-27 Human Machine Interaction or more commonly Human Computer Interaction is the study of interaction between people and computers. It is an interdisciplinary field connecting computer science with many other disciplines such as psychology, sociology and the arts. The present volume documents the results of the MMI research program on Human Machine Interaction involving 8 projects selected from a total of 80 proposals funded by the Hasler Foundation between 2005 and 2008. These projects were also partially funded by the associated universities and other third parties such as the Swiss National Science Foundation. This state-of-the-art survey begins with three chapters giving overviews of the domains of multimodal user interfaces, interactive visualization and mixed reality. These are followed by eight chapters presenting the results of the projects grouped according to the three aforementioned themes.

*Selected Papers on Industrial Machine Vision Systems* Bruce G. Batchelor, Paul F. Whelan, 1994 SPIE Milestones are collections of seminal papers from the world literature covering important discoveries and developments in optics and photonics.
