## Computer Science Undergraduate Project Guide:

**Projects in Computing and Information Systems** Christian Dawson, 2015 Dawson walks graduate and undergraduate students through the process of a research project in computing and information science marking sections that are specific to advance graduate research. The stages she identifies are the background setting a project's foundation conducting the research presenting the results and the future. Among the topics are research choosing a project and writing a proposal literature searching and literature reviews presenting results in written form and final considerations

**Managing Your Software Project** Ian Ricketts, 2012-12-06 About this Book I wrote this book to help students who are about to start their first project. It provides guidance on how to organise your work so that you achieve your agreed objective. The advice is based on experience gained from supervising more than 50 successful student projects in both engineering and computer science during the last 10 years. Projects have varied in duration from 120 hour final year undergraduate projects through 800 hour MSc projects and up to 5000 hour PhD student research projects. It is my experience that almost all students have the technical background to a greater or lesser extent to complete their assigned project but that a disappointingly large number lack the basic organisational framework. Once they are introduced to the rudiments of project management then they are better equipped to control their own progress. They can also concentrate their efforts more effectively on the technical challenges which they will inevitably meet. Of course you can improve your skills solely on the basis of personal experience but you are more likely to achieve your objectives in a timely manner with the help of an experienced guide. That is what I have tried to include within this book. It contains advice on how to solve some of the organisational challenges common to all projects so that you can successfully complete your project

**Resources in Education**, 1982 *Thesis Projects* Mikael Berndtsson, Jörgen Hansson, B. Olsson, Björn Lundell, 2007-10-30 Any B Sc or M Sc study programme in the computing discipline typically ends with a capstone project. A capstone project builds and tests the skills and the knowledge acquired during the education and is an essential part of the training towards becoming a professional. There is a large number of different terms for these types of projects: capstone project, senior project, final year project, B Sc, M Sc, thesis project, etc. In this book we will use the term thesis project and in some cases for the sake of simplicity just project. This book focuses on thesis projects within the computing discipline. Thus the type of project discussed in this book is in line with the capstone format described in the ACM IEEE Computing Curricula 2001 Computer Science p 53 an alternative capstone format is a research experience that includes some original work, a review of the scientific literature and an investigation of a proposed solution followed by a scientific paper and/or an oral presentation of the results. It is important to remember that these are undergraduates and be realistic about the amount and quality of research expected. Even so it may be more worthwhile to expose outstanding students to the challenges of research than to have them design and build yet another program. In this book we present a process for conducting thesis projects with the research orientation described in the quote above.

**Success in Your Project** Philip Weaver,2003-12-18 Final year projects are an important feature of most undergraduate and postgraduate degrees in the fields of Business Information Technology Information Systems Software Engineering and Business Computing These projects usually involve students in the practical application of theory together with a critical analysis or evaluation of the execution of their project or of the theory applied This book is the first to provide detailed guidance and support for students in preparing for conducting and evaluating a system development project independent of the development methodology or technical tools to be used
