**Audio-visual Person Tracking: A Practical Approach** Fotios Talantzis, Aristodemos Pnevmatikakis, Anthony G Constantinides, 2011-12-23 This book deals with the creation of the algorithmic backbone that enables a computer to perceive humans in a monitored space. This is performed using the same signals that humans process i.e. audio and video. Computers reproduce the same type of perception using sensors and algorithms in order to detect and track multiple interacting humans by way of multiple cues like bodies, faces or speech. This application domain is challenging because audio and visual signals are cluttered by both background and foreground objects. First particle filtering is established as the framework for tracking. Then audio visual and also audio visual tracking systems are separately explained. Each modality is analyzed starting with sensor configuration, detection for tracker initialization and the trackers themselves. Techniques to fuse the modalities are then considered. Instead of offering a monolithic approach to the tracking problem, this book also focuses on implementation by providing MATLAB code for every presented component. This way the reader can connect every concept with corresponding code. Finally the applications of the various tracking systems in different domains are studied.

*Household Service Robotics* Yangsheng Xu, Huihuan Qian, Xinyu Wu, 2014-12-05 Copyright 2015 Zhejiang University Press Published by Elsevier Inc. It includes coverage of functionalities such as vision systems, location control and HCI which are important in domestic settings. Provides a single source collection of the latest development in domestic robotic systems and control. Covers vision systems, location control and HCI important in domestic settings. Focuses on algorithms for object recognition, manipulation, human-robot interaction and navigation for household robotics.

Feature-Based Probabilistic Data Association for Video-Based Multi-Object Tracking Grinberg, Michael, 2018-08-10 This work proposes a feature-based probabilistic data association and tracking approach FBPDATA for multi-object tracking. FBPDATA is based on re-identification and tracking of individual video image points, feature points, and aims at solving the problems of partial split, fragmented, bloated or missed detections which are due to sensory or algorithmic restrictions, limited field of view of the sensors as well as occlusion situations.

**Building Scalable Data-Intensive Applications** Chandani Kaul, 2025-01-03 Building Scalable Data-Intensive Applications explores the vast landscape of digital data from social networks, blogs, business, science and engineering. data intensive applications deliver timely and meaningful insights addressing the challenges posed by exponentially growing data complexity. We provide a comprehensive reference for computing professionals and researchers covering the field's scope, key challenges and state of the art approaches required for future data intensive problems. Our chapters include general principles and methods for designing and managing systems that analyze vast datasets, particularly those stored in the cloud. Additionally, we explore practical applications in cybersecurity and bioinformatics to illustrate these principles in action. **Building Scalable Data Intensive Applications** is an invaluable resource for anyone looking to navigate and harness the power of data intensive computing.

**International Handbook of AI Law** Matthias Artzt, Oliver Belitz, Simon Hembt, Nils Lölfing, 2024-12-03

In recent years, the field of Artificial Intelligence AI has seen remarkable advances revolutionizing how we live, work, and interact with technology. As AI systems grow increasingly sophisticated and autonomous, they raise new and challenging legal questions, particularly regarding AI specific risks associated with automated systems. This indispensable handbook, written in clear language by international experts from all over the world, sheds light on the complex relationship between AI and the law, covering both existing laws and emerging AI specific legal regulations. Beginning with a comprehensive and insightful technical analysis of how AI works, subsequent chapters cover a wide array of legal fields relevant to AI technology, focusing on the legal framework in the EU including the following topics: the EU AI Act, AI Specific Liability and Product Safety, Data Protection Law, Intellectual Property, Contracting, Antitrust, Criminal Law, Cybersecurity, Employment Law, and Legal Tech. The book concludes with country reports on the legal and regulatory environment in the United Kingdom, the United States, China, and Japan, contrasting them with the EU legal framework. Each chapter offers practical advice for implementing legal principles, making the handbook a valuable resource for real world applications. It is an essential guide for practitioners, policymakers, academics, and others seeking a deep understanding of the complex legal challenges posed by AI use. The handbook aids in responsible and trustworthy AI development and use by guiding decision making, reducing risks, and protecting the rights and well-being of individuals and society.
