**The Artificial Intelligence and Machine Learning Blueprint: Foundations, Frameworks, and Real-World Applications** Priyambada Swain, 2025-08-06 In the current era of data centric transformation Artificial Intelligence AI and Machine Learning ML are influencing organizational strategies and operations The AI and Machine Learning Blueprint serves as a guide connecting academic concepts with industry applications It is intended for both students seeking basic knowledge and professionals interested in deploying scalable AI systems The book covers core mathematical principles relevant to AI including linear algebra probability statistics and optimization and provides an overview of classical machine learning algorithms neural networks and reinforcement learning Concepts are illustrated with practical examples Python code and case studies from sectors such as healthcare finance cybersecurity natural language processing and computer vision Operational considerations are also addressed with chapters on MLOps model deployment explainable AI XAI and ethics The text concludes with information on emerging topics including generative AI federated learning and artificial general intelligence AGI With a blend of theoretical depth and practical relevance this book is an essential blueprint for mastering AI and ML in today's intelligent systems landscape

**IoT, Big Data and AI for Improving Quality of Everyday Life: Present and Future Challenges** Pradeep Kumar Singh, Sławomir T. Wierzchoń, Wiesław Pawłowski, Arpan Kumar Kar, Yugal Kumar, 2023-08-23 This book focuses mainly on the usages of three key technologies IoT big data and AI for various day to day applications Further it explores the possibilities of future research based on the usages of latest information systems This book explores the current research and challenges to be faced by different researchers for building intelligent information solutions using key technologies IoT big data and AI in improving quality of lives in smart cities and explores the limitations and capabilities of these three key computing technologies The book is organized into three major parts each part includes chapters exploring a specific topic and there are PART 1 IoT for Real World Solutions ii Part 2 Big Data And Cloud Computing for Innovative Solutions For Day to Day Lives and iii Part 3 Artificial Intelligence for Everyday Lives This book may be useful to the scientists scholars and researchers who are working in the field of computer science and engineering and communication engineering along with the students in these subjects who are working or willing to work on IoT big data and AI technologies for improving quality of everyday life Specialists as well as student readers find the book chapters encouraging and helpful IoT data science cloud and AI all are the undergraduate UG bachelor subjects Use of these three key technologies for building new applications for better world is helpful for UG and postgraduate PG MS Programmes students as an elective and core course This book may also be very useful for the Ph D research scholars during their course work and may be used as an instrument to identify the different challenges associated with information systems

**Artificial Intelligence and Data Mining Approaches in Security Frameworks** Neeraj Bhargava, Ritu Bhargava, Pramod Singh Rathore, Rashmi Agrawal, 2021-08-24 ARTIFICIAL INTELLIGENCE AND DATA MINING IN

SECURITY FRAMEWORKS Written and edited by a team of experts in the field this outstanding new volume offers solutions to the problems of security outlining the concepts behind allowing computers to learn from experience and understand the world in terms of a hierarchy of concepts with each concept defined through its relation to simpler concepts Artificial intelligence AI and data mining is the fastest growing field in computer science AI and data mining algorithms and techniques are found to be useful in different areas like pattern recognition automatic threat detection automatic problem solving visual recognition fraud detection detecting developmental delay in children and many other applications However applying AI and data mining techniques or algorithms successfully in these areas needs a concerted effort fostering integrative research between experts ranging from diverse disciplines from data science to artificial intelligence Successful application of security frameworks to enable meaningful cost effective personalized security service is a primary aim of engineers and researchers today However realizing this goal requires effective understanding application and amalgamation of AI and data mining and several other computing technologies to deploy such a system in an effective manner This book provides state of the art approaches of artificial intelligence and data mining in these areas It includes areas of detection prediction as well as future framework identification development building service systems and analytical aspects In all these topics applications of AI and data mining such as artificial neural networks fuzzy logic genetic algorithm and hybrid mechanisms are explained and explored This book is aimed at the modeling and performance prediction of efficient security framework systems bringing to light a new dimension in the theory and practice This groundbreaking new volume presents these topics and trends bridging the research gap on AI and data mining to enable wide scale implementation Whether for the veteran engineer or the student this is a must have for any library This groundbreaking new volume Clarifies the understanding of certain key mechanisms of technology helpful in the use of artificial intelligence and data mining in security frameworks Covers practical approaches to the problems engineers face in working in this field focusing on the applications used every day Contains numerous examples offering critical solutions to engineers and scientists Presents these new applications of AI and data mining that are of prime importance to human civilization as a whole *Exploring Cognitive, Affective, Design Thinking, Artificial Intelligence, Cybernetics and E-Learning Dimensions in Contemporary Education*, 2025-12-18 This volume offers a timely and forward looking examination of how emerging technologies teaching innovations and interdisciplinary theories are reshaping education globally It addresses the convergence of cognitive and emotional learning design thinking artificial intelligence and cybernetics across all levels of education from early childhood to higher education and initial teacher education ITE Through conceptual inquiry and applied research this volume provides insights into how educators and institutions can evolve to meet the changing demands of an increasingly digital and interconnected world *CBSE Class 10 Artificial Intelligence Chapter-wise Question Bank For 2026 Exam | As Per New Syllabus | Including Employability Skills* Nodia, 2025-10-02 CBSE Class 10 Artificial Intelligence Chapter wise Question Bank is designed strictly

as per the latest CBSE syllabus and exam pattern providing structured topic wise preparation It covers all chapters of AI 417 including introduction to AI data science basics machine learning concepts neural networks and ethical AI with MCQs competency based case study and application oriented questions Each chapter includes clear explanations and practice questions to strengthen concept clarity practical understanding and exam readiness making it ideal for CBSE Class 10 AI board exam preparation

*Activating Academia for an Era of Colliding Crises* Alison Julia Katherine Green, Adam R. Aron, James Dyke, 2025-10-28 While there has been discussion for decades about the need to rethink the core purpose of academia to enable all to live well on a planet of finite resources humanity's present predicaments point to a paradox at the heart of the academic enterprise Although academic institutions have originated research and innovations that underpin much of what we view as development and progress these same advances are also responsible for the global crises we now face Indeed many voices are now arguing that academia can and must do more to drive the transformative change that is needed if we are to avert the imminent catastrophe that is almost upon us The Alliance for Sustainability leadership in Education EAUC in conjunction with Second Nature and the United Nations Environment's Youth and Education Alliance announced in 2019 that over 7 000 higher and further education institutions across six continents were declaring a climate emergency with a three point plan for action as part of the Race to Zero This enshrined a bolder commitment from academia to play its part in achieving net zero greenhouse gas emissions While there has been success over several decades in fostering Education for Sustainable Development ESD and in embedding sustainability in curricula the efficacy of this has arguably been limited by the disciplinary silos in which academics find themselves Similarly the research and scholarly work that is needed to fully understand planetary limits transcends the traditional silos of academic disciplines This Research Topic then will examine what needs to change to optimise ESD and transdisciplinary approaches to research and teaching It will explore ways in which theories of change can be brought to bear on these issues Our Research Topic also centres on the responsibility acknowledged increasingly by academics for academic institutions and sectors and for academics themselves to do more As trusted educators communicators and policy influencers academia has unique potential and responsibility to guide students and society through this transition to a better future In the case of many academics this means embracing advocacy and activism as their moral responsibility at this point in humanity's history To this end the Research Topic will consider ways in which climate justice principles may be used to explore the responsibilities of academic institutions as one example of an actor with the capacity to influence the drivers of climate breakdown to act In some nations academic institutions have fallen prey to a set of neoliberal assumptions that have arguably diminished the agency of individual academics The marketisation of higher education is rife in some nations e.g. UK and US and while some academics have documented rising inequality a deepening climate and ecological crisis socio economic breakdown and the deteriorating psychological and physical well being these engender they have so far proven mostly powerless to reorient their fields to

confront these challenges at the institutional level. Consequently they remain unable to pursue an agenda for change that benefits their students and wider society. This Research Topic welcomes research that explores actions available to academics from diverse perspectives including models of behavioural change. Decades of research have shown that warnings do not work and that evidence based recommendations do not necessarily translate into policy or institutional change. Academics increasingly refer to a broken science society contract suggesting that calls to listen to the science and expectations that warnings issued by scientists will be heeded reflect a depoliticized view of the relationships between science and society. This failure to recognise the intricate ways in which science and policy are connected raises questions about the neutrality of research and the academic enterprise. Our Research Topic invites articles that explore how we might re-make the science society contract. Questions about the independence and interdependence of research and teaching inevitably arise when academic institutions are in receipt of funds from corporations, charities, foundations and individuals. Institutions can be compromised by vested interests often in the form of corporate interests that can influence research curriculum and staff appointments and the will of senior management to address this problem is poor. While there are laudable initiatives aimed at resolving intersecting challenges and promoting transdisciplinary approaches in higher education it is fair to say that increasing numbers of academics globally realise that we are not set up to ready society for an era of colliding environmental and social crises. Many fear that academia is guilty of perpetuating the problems that have created this crisis. And while growing numbers hold this view few have ready answers as to what more academics and academic institutions can do. In spite of this some academics have chosen to step outside of their conventional roles embracing advocacy and activism either taking individual action outside of their role or seeking to drive change within their institutions. One problem is that action is fragmented often reliant upon the energies and tenacity of one or more individuals who have sought to re-define their roles to embrace the responsibility they feel to act. The Research Topic will serve to aggregate work on academic activism and to raise awareness of ways in which academics can act. It will also examine the notion that we need to remake the science society contract and will explore what that entails. The Research Topic will explore the interrelations between science and society and highlight the need to examine political dimensions of decision making and knowledge production. To begin to provide answers to the questions of what it is that academics can do to drive transformational change this Research Topic brings together voices from diverse disciplines and nations. Their voices have in common one thing each has reflected on or re-imagined their role and purpose as an academic and each has embraced advocacy or activism. The articles will be organised around three broad themes: i) In what ways are our academic institutions either failing or succeeding? We invite articles that expose the overt and covert influences on academia such as neoliberal structures and fossil fuelled research agendas. We also invite articles centred on examples of good practice such as initiatives to foster transdisciplinary approaches to research and education. ii) Trailblazers for transformative change. We invite case

studies and critiques from the front lines from academics exploring and putting into practice their own take on What can I do  
 Evaluations of what has and has not worked to drive change at the institutional and individual levels are welcomed iii The  
 disruptors that are already initiating transformations in HE The growth of for profit private providers open access teaching  
 resources and other online approaches that threaten the business models of existing public and nonprofit institutions who  
 struggle to compete with the relevance and just in time education that is becoming available via novel actors We welcome  
 articles exploring the potential for disruption     Towards HRI of Everyday Life Karolina Zawieska, Mohammad Obaid , Wafa  
 Johal, Jessica Sorenson, Catharina Vesterager Smedegaard, Glenda Hannibal, 2025-10-03 Presently it is often assumed that at  
 least in principle robots and social robots in particular have the potential to increase human well being across a wide range  
 of sectors and application areas At the same time efforts to introduce such systems into our everyday environments have had  
 only limited success and it is yet to be seen whether the impact of social robots on our daily lives professional and private will  
 actually be beneficial Therefore there is a need to systematically address and study the long term use and presence of social  
 robots in everyday environments where humans not only interact with robots but also have them integrated into the totality  
 of their lived experiences in everyday life One of the main ways to investigate human engagement with social robots in  
 everyday environments is through HRI studies conducted in the wild While such an approach has certainly been instrumental  
 to and is increasingly used in HRI research we propose here to further expand the underlying theoretical and methodological  
 frameworks to address the notion of everyday life The latter is viewed here as a useful concept and an umbrella term that  
 allows us to address not only specific application domains for robots but also the continuity and totality of human lived  
 experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in  
 everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be  
 systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of  
 disciplinary and interdisciplinary contributions to further develop the HRI domain     **Artificial Intelligence** Rainer
