Auer, Wolfgang Pachatz, Tiia Rüttnann, 2023-02-22 We are currently witnessing a significant transformation in the development of education on all levels and especially in post secondary education To face these challenges higher education must find innovative ways to quickly respond to these new needs These were the aims connected with the 25th International Conference on Interactive Collaborative Learning ICL2022 which was held in Vienna Austria from September 27 to 30 2022 Since its beginning in 1998 this conference is devoted to new approaches in learning with a focus on collaborative learning in higher education This book contains papers in the fields of New Learning Models and Applications Project Based Learning Engineering Pedagogy Education Research in Engineering Pedagogy Teaching Best Practices Real World Experiences Academia Industry Partnerships Trends in Master and Doctoral Research Interested readership includes policymakers academics educators researchers in pedagogy and learning theory school teachers the learning industry further and continuing education lecturers etc     Algorithms, Software and Hardware of Parallel Computers J. Miklosko, V. J. Kotov, 2013-04-17 Both algorithms and the software and hardware of automatic computers have gone through a rapid development in the past 35 years The dominant factor in this development was the advance in computer technology Computer parameters were systematically improved through electron tubes transistors and integrated circuits of ever increasing integration density which also influenced the development of new algorithms and programming methods Some years ago the situation in computers development was that no additional enhancement of their performance could be achieved by increasing the speed of their logical elements due to the physical barrier of the maximum transfer speed of electric signals Another enhancement of computer performance has been achieved by parallelism which makes it possible by a suitable organization of  $n$  processors to obtain a performance increase of up to  $n$  times Research into parallel computations has been carried out for several years in many countries and many results of fundamental importance have been obtained Many parallel computers have been designed and their algorithmic and programming systems built Such computers include ILLIAC IV DAP STARAN OMEN STAR 100 TEXAS INSTRUMENTS ASC CRAY 1 C mmp CM CLIP 3 PEPE This trend is supported by the fact that a many algorithms and programs are highly parallel in their structure b the new LSI and VLSI technologies have allowed processors to be combined into large parallel structures c greater and greater demands for speed and reliability of computers are made     **Computation Structures** Stephen A. Ward, Robert H. Halstead, 1990 Developed as the text for the basic computer architecture course at MIT Computation Structures integrates a thorough coverage of digital logic design with a comprehensive presentation of computer architecture     **The Logic Design of Transistor Digital Computers** Gerald A. Maley, John Earle, 1963     **Computer Elements and Systems**, 1972     **final report application of logic to the design of computing machines** a.w. burks/h.wang/j.holland, 1959     **Tools for Structured and Object-oriented Design** Marilyn Bohl, Maria Rynn, 2008 This text offers a concept oriented against an example oriented approach with many step by step examples that support the concepts It adds a new chapter that explores

object oriented programming concepts in a language independent manner      **Introduction to Computer Architecture and Organization** Harold Lorin, 1982 An introduction to the nature of computer architecture and organization Presents interesting problems with elegant solutions with emphasis on the abstract elements of the problems common to all computer design Addresses the several schools of thought on what constitutes a good computer architecture focusing on the current RISC versus non RISC approaches Also discusses the downward drift of design sophistication to smaller machines such as pipelines caches and overlapped I O Includes many examples of specific machines and the design philosophy behind them
