

## Physics Concepts Study Guide

### Distance vs. Displacement

- Distance is the total length of travel
  - Measured in meters
- Displacement is the change in position with direction
  - Measured in meters
  - Displacement = final position - initial position
  - $\Delta x = x_f - x_i$

### Speed and Velocity

- Average Speed is the total distance over time
  - o Measured in meters per second (m/s)
- Average Velocity is the displacement over total time
  - o Measured in meters per second (m/s)
  - o  $V_{avg} = \Delta x / \Delta t = (x_f - x_i) / (t_f - t_i)$
- Instantaneous Velocity is the displacement over time
  - o The velocity at a certain instant of time
  - o Measured in meters per second (m/s)
- \* Note: When velocity is constant, the average velocity is equal to the instantaneous velocity at any time.

### Acceleration

- Average acceleration is the rate of change of velocity with time
  - o Measured in m/s<sup>2</sup>
  - o  $A_{avg} = \Delta v / \Delta t = (v_f - v_i) / (t_f - t_i)$
- Instantaneous Acceleration is the velocity per time
  - o The acceleration at a certain instant of time
  - o Measured in m/s<sup>2</sup>
- Does not depend on mass

### Variations of equations:

$$V_{avg} = \frac{1}{2} (v_i + v_f)$$

$$v_f = v_i + at \text{ (when } t_i = 0\text{)}$$

$$x_f = x_i + v_i t + \frac{1}{2} a t^2$$

$$\Delta x = v_i t + \frac{1}{2} a t^2$$

$$v_f^2 = v_i^2 + 2a(x_f - x_i) \Leftarrow \text{when don't have time}$$

- \* Note: When linear equations are vertical, accelerations will always be 9.81 m/s<sup>2</sup> DOWN
  - When an object is thrown vertically upward then its speed on returning to its original starting point is the same as its initial speed.

### Vectors

- Any quantity that refers to both a magnitude (number) and a direction
  - Displacement and Velocity are examples of vectors
  - In projectile launch problems:

Cutnell,2004    **Learning and Understanding** National Research Council,Division of Behavioral and Social Sciences and Education,Center for Education,Committee on Programs for Advanced Study of Mathematics and Science in American High Schools,2002-09-06 This book takes a fresh look at programs for advanced studies for high school students in the United States with a particular focus on the Advanced Placement and the International Baccalaureate programs and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs this report provides teachers parents curriculum developers administrators college science and mathematics faculty and the educational

Amin, Laura Branchetti, Mariana Levin, 2021-09-24 This book starts with the premise that beauty can be an engine of transformation and authentic engagement in an increasingly complex world. It presents an organized picture of highlights from the 13th European Science Education Research Association Conference ESERA 2019 held in Bologna Italy. The collection includes contributions that discuss contemporary issues such as climate change, multiculturalism and the flourishing of new interdisciplinary areas of investigation including the application of cognitive neuroscience, artificial intelligence and digital humanities to science education research. It also highlights learners' difficulties engaging with socio scientific issues in a digital and post truth era. The volume demonstrates that deepening our understanding is the preferred way to address these challenges and that science education has a key role to play in this effort. In particular the book advances the argument that the deep and novel character of these challenges requires a collective search for new narratives and languages, an expanding knowledge base and new theoretical perspectives and methods of research. The book provides a contemporary picture of science education research and looks to the theoretical and practical societal challenges of the future **Resources in Education**, 1998 [Columbia Review High-yield Physics](#) Stephen D. At that time European climbers developed new equipment and techniques enabling them to ascend mountain faces and to climb rocks which were considered unassailable up to that time. American climbers went further by expanding and improving on the equipment. They even developed a system of quantification where points were given for the degree of difficulty of an ascent. This system focused primarily on the pitch of the mountain and it even calculated up to de mals to give a high degree of quantification. Rock climbing became a technical system. Csikszentmihaly 1976 observed that the sole interest of rock climbers at that time was to climb the rock. Rock climbers were known to reach the top and not even glance around at the scenery. The focus was on reaching the top of the rock. In contrast mountaineers saw the whole mountain as a single unit of perception. The ascent to them is a gestalt including the aesthetic, historical, personal and physical sensations. Csikszentmihaly 1976 p 486 This is an example of two contrasting approaches to the same kind of landscape and of two different groups of people. Interestingly in the US, Europe and Japan a large segment of the early rock climbers were young mathematicians and theoretical physicists while the mountaineers were a more varied lot [Proceedings of the 18th European Conference on Game-Based Learning](#)
