Katz,2005-12-22 Written by internationally recognized scientists from academic industrial and governmental sectors Inhalation Toxicology Second Edition details the methods and materials used

in the theoretical and applied aspects of inhalation toxicology. The editors emphasize the relationship between the respiratory system and toxicology of inhaled substances and examine methods and measurements for improving our understanding of the basic mechanisms of effects. The book delineates key issues in the field such as regulatory aspects of exposure and testing, testing equipment and methods, biomarkers, pathology, allergies and immunology, irritation of the respiratory tract and risk assessment. It covers the inhalation of bioaerosols and toxins ranging from anthrax to household molds as well as genomics, proteomics and low level exposure toxicants such as tobacco smoke and chemical warfare agents. Highlights include coverage of the Acute Exposure Guidelines and Emergence Response Guidelines and recent changes in the European and American guidelines for testing procedures.
