Concepts Of Classical Optics John Strong:

Concepts of Classical Optics, 1958 Optical Engineering Fundamentals Bruce H. Walker, 1998 This text aims to expose students to the science of optics and optical engineering without the complications of advanced physics and mathematical theory

Superresolution Optical Microscopy Barry R. Masters, 2020-03-21 This book presents a comprehensive and coherent summary of techniques for enhancing the resolution and image contrast provided by far field optical microscopes It takes a critical look at the body of knowledge that comprises optical microscopy compares and contrasts the various instruments provides a clear discussion of the physical principles that underpin these techniques and describes advances in science and medicine for which superresolution microscopes are required and are making major contributions The text fills significant gaps that exist in other works on superresolution imaging firstly by placing a new emphasis on the specimen a critical component of the microscope setup giving equal importance to the enhancement of both resolution and contrast Secondly it covers several topics not typically discussed in depth such as Bessel and Airy beams the physics of the spiral phase plate vortex beams and singular optics photoactivated localization microscopy PALM stochastic optical reconstruction microscopy STORM structured illumination microscopy SIM and light sheet fluorescence microscopy LSM Several variants of these techniques are critically discussed Noise optical aberrations specimen damage and artifacts in microscopy are also covered The importance of validation of superresolution images with electron microscopy is stressed Additionally the book includes translations and discussion of seminal papers by Abbe and Helmholtz that proved to be pedagogically relevant as well as historically significant This book is written for students researchers and engineers in the life sciences medicine biological engineering and materials science who plan to work with or already are working with superresolution light microscopes The volume can serve as a reference for these areas while a selected set of individual chapters can be used as a textbook for a one semester undergraduate or first year graduate course on superresolution microscopy Moreover the text provides a captivating account of curiosity skepticism risk taking innovation and creativity in science and technology Good scientific practice is emphasized throughout and the author's lecture slides on responsible conduct of research are included as an online resource which will be of interest to students course instructors and scientists alike

Instrumentation

Between Science, State and Industry B. Joerges, T. Shinn, 2012-12-06 In this book we appropriate their conception of research technology and extend it to many other phenomena which are less stable and less localized in time and space than the Zeeman Cotton situation In the following pages we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods In particular we use the term for instances where instruments and methods traverse numerous geographic and institutional boundaries that is fields distinctly different and distant from the instruments and methods initial focus We suggest that instruments such as the ultra centrifuge and the trajectories of the men who devise such artefacts diverge in an interesting

way from other forms of artefacts and careers in science metrology and engineering with which students of science and technology are more familiar. The instrument systems developed by research technologists strike us as especially general, open ended and flexible. When tailored effectively, research technology instruments potentially fit into many niches and serve a host of unrelated applications. Their multi functional character distinguishes them from many other devices which are designed to address specific narrowly defined problems in a circumscribed arena in and outside of science. Research technology activities link universities, industry, public and private research or metrology establishments, instrument making firms, consulting companies, the military and metrological agencies. Research technology practitioners do not follow the career path of the traditional academic or engineering professional.
