## Concur 2009 Concurrency Theory Author Mario Bravetti Sep 2009:

**CONCUR 2009 - Concurrency Theory** Mario Bravetti, Gianluigi Zavattaro, 2009-09-01 This volume contains the proceedings of the 20th Conference on Concurrency Theory CONCUR 2009 held in Bologna September 1-4 2009. The purpose of the CONCUR conference is to bring together researchers, developers and students in order to advance the theory of concurrency and promote its applications. This year the CONCUR conference was in its 20th edition and to celebrate 20 years of CONCUR the conference program included a special session organized by the IFIP Working Groups 1.8 Concurrency Theory and 2.2 Formal description of Programming Concepts as well as an invited lecture given by Robin Milner one of the fathers of the concurrency theory research area. This edition of the conference attracted 129 submissions. We wish to thank all their authors for their interest in CONCUR 2009. After careful discussions the Program Committee selected 37 papers for presentation at the conference. Each of them was accurately refereed by at least three reviewers, four reviewers for papers co-authored by members of the Program Committee who delivered detailed and insightful comments and suggestions. The conference Chair warmly thank all the members of the Program Committee and all their sub-referees for the excellent support they gave as well as for the friendly and constructive discussions. We would also like to thank the authors for having revised their papers to address the comments and suggestions by the referees. The conference program was enriched by the outstanding invited talks by Martin Abadi, Christel Baier, Corrado Priami and as mentioned above Robin Milner.

**CONCUR 2008 - Concurrency Theory** Franck van Breugel, Marsha Chechik, 2008-08-19 This volume contains the proceedings of the 19th International Conference on Concurrency Theory CONCUR 2008 which took place at the University of Toronto in Toronto, Canada, August 19-22, 2008. CONCUR 2008 was co-located with the 27th Annual ACM SIGACT SIGOPS Symposium on the Principles of Distributed Computing PODC 2008 and the two conferences shared two invited speakers, some social events and a symposium celebrating the lifelong research contributions of Nancy Lynch. The purpose of the CONCUR conferences is to bring together researchers, developers and students in order to advance the theory of concurrency and promote its applications. Interest in this topic is continuously growing as a consequence of the importance and ubiquity of concurrent systems and their applications and of the scientific relevance of their foundations. Topics include basic models of concurrency such as abstract machines, domain theoretic models, game theoretic models, process algebras and Petri nets, logics for concurrency such as modal logics, temporal logics and resource logics, models of specialized systems such as biology inspired systems, circuits, hybrid systems, mobile systems, multi-core processors, probabilistic systems, real time systems, synchronous systems and Web services, verification and analysis techniques for concurrent systems such as abstract interpretation, atomicity checking, mod checking, race detection, run time verification, state space exploration, static analysis,

synthesis testing theorem proving and type systems and related programming models such as distributed or object oriented Of the 120 regular and 5 tool papers submitted this year 33 regular and 2 tool papers were accepted for presentation and are included in the present volume **CONCUR 2014 - Concurrency Theory** Paolo Baldan, University of Roma "La Sapienza", 2014-08-06

Among the topics covered are: moduls of computation and semantic domains, process algebras, Petri Nets, event structures, real time systems, hybrid systems, model checking, verification techniques, refinement, rewriting, typing systems and algorithms etc.

**Concurrency Theory** Philippa Gardner, 2006 **Introduction to Concurrency Theory** Roberto Gorrieri, Cristian Versari, 2016-10-22

This book presents the fundamentals of concurrency theory with clarity and rigor. The authors start with the semantic structure namely labelled transition systems which provides us with the means and the tools to express processes to compose them and to prove properties they enjoy. The rest of the book relies on Milner's Calculus of Communicating Systems tailored versions of which are used to study various notions of equality between systems and to investigate in detail the expressive power of the models considered. The authors proceed from very basic results to increasingly complex issues with many examples and exercises that help to reveal the many subtleties of the topic. The book is suitable for advanced undergraduate and graduate students in computer science and engineering and scientists engaged with theories of concurrency.

**CONCUR '96: Concurrency Theory** Ugo Montanari, Vladimiro Sassone, 1996-08-07
