Concurrency State Models Java Programs:

Concurrency Jeff Magee,Jeff Kramer,2006 Concurrency provides a thoroughly updated approach to the basic concepts and techniques behind concurrent programming Concurrent programming is complex and demands a much more formal approach than sequential programming **Concurrency** Jeff Magee,Jeff Kramer,2006-06-16 Designed to give students hands on design and programming experience this book provides a motivational learning package for a fascinating area of software design

Model Driven Engineering Languages and Systems Oscar Nierstrasz,Jon Whittle,David Harel,Gianna Reggio,2006-11-23 This book constitutes the refereed proceedings of the 9th International Conference on Model Driven Engineering Languages and Systems formerly UML conferences MoDELS 2006 The book presents 51 revised full papers and 2 invited papers Discussion is organized in topical sections on evaluating UML MDA in software development concrete syntax applying UML to interaction and coordination aspects model integration formal semantics of UML security model transformation tools and implementation and more

, **Integrated Formal Methods** Eerke Boiten,John Derrick,Graeme Smith,2004-03-05 The fourth conference in the series of international meetings on Integrated Formal Methods IFM was held in Canterbury UK 4-7 April 2004 The conference was organized by the Computing Laboratory at the University of Kent whose main campus is just outside the ancient town of Canterbury part of the county of Kent Kent is situated in the southeast of England and the university sits on a hill overlooking the city of Canterbury and its world renowned cathedral The University of Kent was granted its Royal Charter in 1965 Today there are almost 10 000 full time and part time students with over 110 nationalities represented The IFM meetings have proven to be particularly successful The first meeting was held in York in 1999 and subsequently we held events in Germany in 2000 and then Finland in 2002 The conferences are held every 18 months or so and attract a wide range of participants from Europe the Americas Asia and Australia The conference is now firmly part of the formal methods conference calendar The conference has also evolved in terms of themes and subjects presented and this year in line with the subject as a whole we saw more work on verification as some of the challenges in this subject are being met The work reported at IFM conferences can be seen as part of the attempt to manage complexity by combining paradigms of specification and design so that the most appropriate design tools are used at different points in the life cycle

Communicating Process Architectures 2007 Alistair A. McEwan,2007 Deals with Computer Science and models of Concurrency This title emphasizes on hardware software co design and the understanding of concurrency that results from these systems It includes a range of papers on this topic from the formal modeling of buses in co design systems through to software simulation and development environments

Model Checking Software Thomas Ball,Sriram K. Rajamani,2003-04-28 This book constitutes the refereed proceedings of the 10th International SPIN workshop on Model Checking of Software SPIN 2003 held in Portland OR USA in May 2003 as an ICSE 2003 satellite workshop The 14 revised full papers and 3 revised tool papers presented were carefully reviewed and selected from 30 submissions The book presents

state of the art results on the analysis and verification of distributed software systems using the SPIN model checker as one of the most powerful and widely applied systems **Quality of Software Architectures Models and Architectures**

Steffen Becker, Frantisek Plasil, Ralf H. Reussner, 2008-10-07 Models are used in all kinds of engineering disciplines to abstract from the various details of the modelled entity in order to focus on a specific aspect. Like a blueprint in civil engineering a software architecture provides an abstraction from the full software system's complexity. It allows software designers to get an overview on the system under development and to analyze its properties. In this sense models are the foundation needed for software development to become a true engineering discipline. Especially when reasoning on a software system's extra functional properties its software architecture carries the necessary information for early design time analyses. These analyses take the software architecture as input and can be used to direct the design process by allowing a systematic evaluation of different design alternatives. For example they can be used to cancel out decisions which would lead to architecture signs whose implementation would not comply with extra functional requirements like performance or reliability constraints. Besides such quality attributes directly visible to the end user internal quality attributes e.g. maintainability also highly depend on the system's architecture. In addition to the above mentioned technical aspects of software architecture models non technical aspects especially project management related activities require an explicit software architecture model. The models are used as input for cost estimations, time deadline and resource planning for the development teams. They serve the project management activities of planning, executing and controlling which are necessary to deliver high quality software systems in time and within the budget. **Coordination Languages and Models**, 2000 *Java in Distributed Systems*

Marko Boger, 2001-05-25 Large and complex software systems such as Internet applications depend on distributed applications. Although Java has helped reduce the complexity of distributed systems, developers still have to contend with diverse hardware platforms, remote communication over networks and system failures. *Java in Distributed Systems* provides a comprehensive guide for anyone wishing to deepen their knowledge of Java in distributed applications. Beginning with a tutorial guide to distributed programming in the Java environment, it shows you how building blocks from threads to Jini can help you to fulfil Sun's vision that the Network is the Computer. It then goes on to focus on aspects that are still challenging researchers such as concurrency, distribution and persistence. Key Features: One of the few books to focus specifically on Java for building distributed applications. Coverage includes threads, sockets, RMI, CORBA, Voyager, Mobile agents, JDBC, object-oriented databases, Java spaces and Jini. Includes advanced chapters on the cutting edge of Java language development, including the author's own proposed Dejavu Distributed Java, an open source project that offers a unified approach to concurrency, distribution and persistence. **Successful Strategies for Debugging Concurrent Software** Scott Douglas Fleming, 2009 *Model Checking Software*, 2005 **Proceedings of the Joint 10th European Software Engineering Conference (ESEC) and the 13th ACM SIGSOFT Symposium on the Foundations of Software Engineering (FSE-13)**
