The Environmental Design Pocketbook Sofie Pelsmakers, 2019-10-23 The Environmental Design Pocketbook 2nd ed places the information you need for sustainable low energy building design at your fingertips Packed with diagrams tools and tips it cuts through the complex mass of technical data and legislation that faces the designer and distils all the key guidance into a single reference that is quick easy to use and points to the facts figures and performance data that are most important This 2nd edition is now fully up to date with the latest Building Regulations Part L and F legislation England and Wales RIBA Plan of Work 2013 new information on the Green Deal and Zero Carbon and contains revised references and further reading sections throughout Whether used in the classroom office or on site the book guides the designer through the entire process from the fundamentals to the building details From future proofing for a changing climate to rainwater harvesting retrofit and zero carbon technologies the Pocketbook has got it covered

Air Conditioning Application and Design W.P. Jones, 2012-11-12 Intended for advanced students of building services this practical book describes the design of air conditioning systems Readers are assumed to have a knowledge of the basic principles of air conditioning which are covered in the companion volume Air Conditioning Engineering This new edition takes account of the latest building codes and pays greater attention to energy conservation The section on systems characteristics is expanded and extensively revised to take account of developments in the technology of air conditioning since publication of the previous edition There are expanded sections on specialist applications such as systems for clean rooms in the semiconductor industry The author has wide experience both in lecturing on the subject and in the practical design and installation of air conditioning systems

Faber & Kell's Heating and Air-Conditioning of Buildings Doug Oughton, Steve Hodgkinson, Richard Brailsford, 2014-11-27 For over 70 years Faber Kell's has been the definitive reference text in its field It provides an understanding of the principles of heating and air conditioning of buildings in a concise manner illustrating practical information with simple easy to use diagrams now in full colour This new look 11th edition has been reorganised for ease of use and includes fully updated chapters on sustainability and renewable energy sources as well as information on the new Building Regulations Parts F and L As well as extensive updates to regulations and codes it now includes an introduction that explains the role of the building services engineer in the construction process Its coverage of design calculations advice on using the latest technologies building management systems operation and maintenance makes

prediction methods are provided It is not envisaged that a designer would ever work step by step through the whole design sequence For this reason Part A is set out in a three column format to enable the reader more easily to locate the particular material which interests him from the left hand column to read the relevant text in the centre column and to pick up the references from the right hand column Many aspects of window design may legitimately be based on experience or intuition rather than on formal analysis for example the use of splayed reveals the position of glazing bars and the use of the colour The role of the design sequence is to prompt the designer when he reaches an impasse and to offer a rational basis for decision making whenever necessary This publication refers to the design of conventional windows in the United Kingdom though it may also apply to other localities with a similar climate Some of the procedures presented are relatively new for example the concept of average daylight factor Although values of average daylight factor have been recommended it should be noted that experience of what the precise values imply in terms of daylight quality and quantity is limited and the recommendations may be changed in the light of experience On a similar note some of the techniques presented for designing conventional windows may not be totally reliable when applied to atrium design Therefore caution is urged when applying the content of the guide to anything other than conventional fenestration In this content window covers vertical glazing in walls and glazing in sloping environments such as roofs Some aspects of window design are beyond the scope of this guide such as constructional methods or problems of strength or weather tightness Guidance on these aspects can be obtained from the window manufacturers
