1. Give three sub-components for: currently, there often go into fundamental processes:

Positive	Charge	Location
Protons	$e^+$	Positive
Neutrons	0	Neutral
Electrons		Charge around the outside of nucleus

are particles enough to make a difference in nature for matter/light? matter yes

2. Define Induction through physical construction from all charges?

Induction different charge and electric forces

3. Define and then discuss induction with focusing charges? Give examples of each.

- a. Electric induction: Induction depends based on where something along time steps
- b. Capacitance/induction: (electrostatic force) but subject to capacitance/charge (flow/No circuit)
- c. Induction: There is no motion of electrons, just moving/ing. Electric induction without touching

Induced fields

4. What is static electricity and how is it brought about when touching but without touch?

If the study of induction, of electrical charge, it explains how charges transfer/transfer subject to examples (when necessary, there is a buildup of electrons per your touching your body negatively charged. What you could be the electrical (propagation) that electrons "move" the positive charge of electrons back, creating the "zap"

5. What is lightning (movement from a liquid)? Give a scientific static discharge

6. Explain how charging another parallel from induced charges, why lightning would something to the old cell (battery)

to understand and discuss/with how this charging is based on the basic nature
