

what contents of dirt is responsible for creating a healthy environment

## Introduction

The minerals in dirt are essential for creating a health environment for plants and animals. Minerals in dirt are like the food for use humans. The right dirt for example protein fats vitamins eg for a human can create a strong and healthy person. It's the same for plants. Plants require sulfate as does humans need proteins for building blocks for repairing and building. The sulfate supports creation of plant proteins. So if there is no sulfate the will be less plants less plant means lesser proteins nutrient more pollutants more global warming more water more water more drowning. This may lead to a green house run off affect possible wiping the planet clean off earth. It can be said the more minerals in the dirt the better for all inhabitants of earth. Anyhow soil can be used to find places to build buildings, dams and farming and much more.  $\text{Ba}^{2+} + \text{SO}_4^{2-} \rightarrow \text{BaSO}_4$

## Aim

To find the percentage of sulfate within the samples of dirt with the equation  $\text{Ba} + \text{SO}_4 \rightarrow \text{BaSO}_4$  to find the values of the sulfate with

## Hypothesis

The dirt with the darker and the highest moisture and is found in a higher biodiversity environment before the sample was collected will have the high sulfate levels. So sample 1000

the large beaker is hot after the boil don't use hands to move

wear safety glasses and laboratory coats

## variables

independent variables

barium

dependent variables
