

Scientific Investigation Study Guide

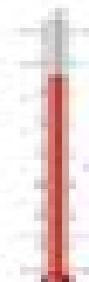

3.1 The student will demonstrate an understanding of scientific methods, including the nature of science, by planning and conducting investigations.

Scientists follow a process to gather knowledge. This process is called the Scientific Method. The Scientific Method has 7 steps:

1. **Question**- ask a question based on something that you have observed.
2. **Background Research** about your question.
3. **Hypothesis**- based on your research, predict or possible answer to your question. (An "If...Then..." statement)
4. **Materials** or **Plan**- what you will experiment.
5. **Experiment**- conduct your experiment.
6. **Collect and Record Data**- Record your experiment results in an organized way.
7. **Show Communication and Conclusion**- Analyze your results, and share them with your peers. Communicate your findings using charts, graphs, and tables!

Scientists:

- Ask and communicate their scientific observations.
- Record their observations for evidence.
- Classify objects into two or more sets based on one or more shared similarities.
- Put objects in an order.
- Measure length, time, mass, volume, and temperature.
- Design and build models to show results.

Key Vocabulary

Observation- one person's sight. It is based on what one person sees.

Prediction- a statement of what you think will happen in the future.

Hypothesis- a statement of what you think will happen if certain events occur. An "If...Then" statement.

Data- information collected in an experiment. Data can be raw, organized, or analyzed, and presented.
