Picture	Tool Name	Tool Description
		Also known as a carpenter's level, this is the most common tool used by carpenters to establish level and plumb lines.
		This simple, but very accurate tool consists of a length of clear plastic tubing. It works on the principle that water always seeks its own level and is commonly used to check level around obstructions.
		This level is commonly used for building layout and site surveying due to its rapid setup time and ease of use. They are internally calibrated to allow surveyors and grading contractors to see level conditions over a significant distance.
