

Chapter 2: Configure a Network Operating System

Every computer requires an operating system to function, including computer-based network devices such as switches, routers, access points, and firewalls. These network devices use an operating system called a network operating system.

A network operating system enables device hardware to function and provides an interface for users to interact. In the CCNA course of study, students learn to configure both devices that connect to the network (end devices such as PCs) and devices that connect networks together (intermediary devices like routers and switches). Learning to configure the Cisco Internetwork Operating System (Cisco IOS) on Cisco routers and switches is a large part of the Cisco CCNA program of study.

The Cisco Internetwork Operating System (IOS) is a generic term for the collection of network operating systems used by Cisco networking devices. Cisco IOS is used for most Cisco devices, regardless of the type or size.

Class Activity - It Is Just an Operating System

In this activity, imagine that you are employed as an engineer for a car manufacturing company. The company is currently working on a new car model. This model will have selected functions that can be controlled by the driver giving specific voice commands.

Design a set of commands used by this voice-activated control system, and identify how they are going to be executed. The functions of the car that can be controlled by voice commands are:

- Lights
- Wipers
- Radio
- Telephone set
- Air conditioning
- Ignition
