topical in nature rather than chronological given the tremendous variability among adults and older persons. This book includes chapters that are arranged to first lay the groundwork for thinking about adult development and then deal with basic psychobiological processes. **Aging and Older Adulthood** Joan T. Erber, 2005. Filled with examples that reflect the diversity of the world we live in, Erber's accessible yet science based book focuses on research and theory that add to our understanding of aging and older adulthood. Erber organizes the book around complementary big point of view theories that focus on successful aging and successful adaptation such as selective optimization with compensation as well as on those that emphasize matching the person's competencies with demands of the environment such as the ecological model. To ensure that students acquire a big picture understanding of the theory's application, Erber closes each chapter with a discussion of these theoretical models. **The Handbook of Aging and Cognition** Fergus I. M. Craik, Timothy A. Salthouse, 2008.

Cognitive aging is a flourishing area of research. This third edition reviews the findings and theories since the previous edition and evaluates the field's points of growth. **Aging and Cognition** Hayden B. Bosworth, Christopher K. Hertzog, 2009. As the world's population ages, the study of aging and its effects on cognition becomes increasingly important. *Aging and Cognition: Research Methodologies and Empirical Advances* takes an interdisciplinary look at cognitive aging—how it happens and how to study it. The first part of the book explores methods for measuring cognitive change, including how to study cohort effects. How can we account for differences in cognitive performance from one cohort to another? Should we assume factor invariance across cohorts or time? These issues are treated in the context of new and existing empirical research, making the discussion of methodological issues more concrete and accessible. The second part of the book explores the social and psychological factors associated with cognitive aging. For example, to what extent do socioeconomic status, optimism, and personal sense of control affect aging? Is the controversial use it or lose it theory of cognition valid? Finally, the concluding section explores how to use research findings to improve the everyday functioning of adults, a challenging task because everyday functioning relies on complex cognitive tasks and most cognitive research measures only basic cognitive tasks. The chapter in this final section uses medication adherence as an example of deriving real world solutions from cognitive research results. With its emphasis on social and contextual factors that influence aging, this book showcases both substantive and methodological developments in the field. It will be useful to everyone who studies aging and cognition.
