## **Data Analysis Using Regression And Multilevel hierarchical Models:**

Data Analysis Using Regression and Multilevel/Hierarchical Models Andrew Gelman, Jennifer Hill, 2007 This book first published in 2007 is for the applied researcher performing data analysis using linear and nonlinear regression and multilevel models

Bayesian Statistical Modeling with Stan, R, and Python Kentaro Matsuura, 2023-01-24 This book provides a highly practical introduction to Bayesian statistical modeling with Stan which has become the most popular probabilistic programming language The book is divided into four parts The first part reviews the theoretical background of modeling and Bayesian inference and presents a modeling workflow that makes modeling more engineering than art The second part discusses the use of Stan CmdStanR and CmdStanPy from the very beginning to basic regression analyses The third part then introduces a number of probability distributions nonlinear models and hierarchical multilevel models which are essential to mastering statistical modeling It also describes a wide range of frequently used modeling techniques such as censoring outliers missing data speed up and parameter constraints and discusses how to lead convergence of MCMC Lastly the fourth part examines advanced topics for real world data longitudinal data analysis state space models spatial data analysis Gaussian processes Bayesian optimization dimensionality reduction model selection and information criteria demonstrating that Stan can solve any one of these problems in as little as 30 lines Using numerous easy to understand examples the book explains key concepts which continue to be useful when using future versions of Stan and when using other statistical modeling tools The examples do not require domain knowledge and can be generalized to many fields The book presents full explanations of code and math formulas enabling readers to extend models for their own problems All the code and data are on GitHub

**Generative AI for Business Analytics and Strategic Decision Making in Service Industry** Venaik, Anita, Chaturvedi, Vijit, Saproo, Sanjay, Bansal, Sanjeev, 2025-01-31 Generative AI is transforming industries by enhancing how businesses analyze data generate content and automate complex processes Its ability to produce diverse high quality outputs in areas like marketing customer engagement and software development is reshaping productivity and innovation By leveraging advanced models such as GANs and Transformers organizations can unlock new insights streamline decision making and personalize services at scale Generative AI also plays a crucial role in detecting errors managing knowledge and mitigating harmful content contributing to safer and more efficient digital environments This technology not only accelerates growth but also democratizes access to powerful tools fostering creativity and problem solving across sectors Generative AI for Business Analytics and Strategic Decision Making in Service Industry provides a comprehensive exploration of how generative AI techniques can revolutionize business intelligence and data analytics practices It offers a detailed examination of innovative algorithms methodologies and tools for leveraging generative AI to extract actionable insights drive innovation and enhance decision making processes within the service industry Covering topics such as big data generative adversarial networks GANs and productivity management this book is an excellent resource for students
