Zussman,2002 What is the relationship between work and family in a world where employment creates endless tensions for families and families create endless tensions for the workplace This collection of reprinted and original articles broadens this discussion by addressing issues from the perspectives of often neglected populations from white middle class women with young children to people of color to poor families to the new sorts of families gays and lesbians are struggling to construct to fathers to older children To discuss work and family is also to discuss gender Ranging from California's Silicon Valley to a remote fishing village in the northeast part one shows how new work arrangements have created new expectations for what it means to be a woman or a man and how slow and uneven the pace of change can be Nowhere are the tensions of work and family more potent than around childcare Part two takes up these tensions showing how various solutions to caring for children of all ages whether infants or teenagers create new problems Parts three and four turn outward to show how the new relationships between families and work are changing the relationships between families and the communities in which they live and generating new social policy dilemmas [Industrial Applications of Formal Methods to Model, Design and Analyze Computer Systems](#) Dan Craigen,Susan Gerhart,1995-01-15 Formal methods are mathematically based techniques often supported by reasoning tools that can offer a rigorous and effective way to model design and analyze computer systems

The purpose of this study is to evaluate international industrial experience in using formal methods. The cases selected are representative of industrial grade projects and span a variety of application domains. The study had three main objectives: To better inform deliberations within industry and government on standards and regulations; To provide an authoritative record on the practical experience of formal methods to date; and To suggest areas where future research and technology development are needed. This study was undertaken by three experts in formal methods and software engineering: Dan Craigen of ORA Canada, Susan Gerhart of Applied Formal Methods, and Ted Ralston of Ralston Research Associates. Robin Bloomfield of Adelard was involved with the Darlington Nuclear Generating Station Shutdown System case. Support for this study was provided by organizations in Canada and the United States. The Atomic Energy Control Board of Canada (AECB) provided support for Dan Craigen and for the technical editing provided by Karen Summerskill. The U.S. Naval Research Laboratories (NRL) Washington DC provided support for all three authors. The U.S. National Institute of Standards and Technology (NIST) provided support for Ted Ralston.
