Current Developments In Differential Geometry And Its Related Fields - Proceedings Of The 4th International Colloquium On Differential Geometry And Its Related Fields Toshiaki Adachi, Hideya Hashimoto, Milen J Hristov, 2015-10-22 This volume contains contributions by the main participants of the 4th International Colloquium on Differential Geometry and its Related Fields ICDG2014. These articles cover recent developments and are devoted mainly to the study of some geometric structures on manifolds and graphs. Readers will find a broad overview of differential geometry and its relationship to other fields in mathematics and physics.

Recent Advances in Differential Geometry and Related Areas Bogdan D. Suceavă, Adara M. Blaga, Marian Ioan Munteanu, Cezar Oniciuc, Shoo Seto, Gabriel-Eduard Vălcu, Lihan Wang, 2025-06-24 This volume contains the proceedings of the AMS Special Session on Recent Advances in Differential Geometry held virtually on April 1-2, 2023, and the Tenth Congress of Romanian Mathematicians Special Session on Recent Advances in the Geometry of Submanifolds held on June 30-July 5, 2023, in Pitești, Romania. In the last two decades, various techniques produced new results in differential geometry, and many of them focused on the geometry of submanifolds, where one of the most important questions, the Willmore conjecture, was solved in 2012 by A. Neves and F. Coda Marques. This invites a reflection on the new trends and research directions that contemporary differential geometry might and will take in its natural development. Some of the most important advances have been obtained by using techniques in geometric analysis, while others have been using more classical methods which are still of interest. Motivated by these new developments, the present volume intends to bring together various viewpoints on the recent study of representing the fundamental idea of space in differential geometry. Of particular interest are the results focused on minimal submanifolds and their generalizations and the related concept of harmonic mappings and their generalizations. In preparing this volume, the editors were particularly interested in the study of curvature functionals in various contexts, from comparison geometry to new curvature invariants, relations between curvature and topology, as well as other related topics.

Riemannian Manifolds and Homogeneous Geodesics Valerii Berestovskii, Yurii Nikonorov, 2020-11-05 This book is devoted to Killing vector fields and the one-parameter isometry groups of Riemannian manifolds generated by them. It also provides a detailed introduction to homogeneous geodesics, that is, geodesics that are integral curves of Killing vector fields, presenting both classical and modern results, some very recent, many of which are due to the authors. The main focus is on the class of Riemannian manifolds with homogeneous geodesics and on some of its important subclasses. To keep the exposition self-contained, the book also includes useful general results not only on geodesic orbit manifolds but also on smooth and Riemannian manifolds, Lie groups and Lie algebras, homogeneous Riemannian manifolds, and compact homogeneous Riemannian spaces. The intended audience is graduate students and researchers whose work involves differential geometry and transformation groups.
