## **Database Annotation In Molecular Biology Principles And Practice:**

Database Annotation in Molecular Biology Arthur M. Lesk,2005-09-01 Two factors dominate current molecular biology the amount of raw data is increasing very rapidly and successful applications in biomedical research require carefully curated and annotated databases The quality of the experimental data especially nucleic acid sequences is satisfactory however annotations depend on features inferred from the data rather than measured directly for instance the identification of genes in genome sequences It is essential that these inferences are as accurate as possible and this requires human intervention With the recognition of the importance of accurate database annotation and the requirement for individuals with particular constellations of skills to carry it out annotators are emerging as specialists within the profession of bioinformatics This book compiles information about annotation its current status what is required to improve it what skills must be brought to bear on database curation and hence what is the proper training for annotators The book should be essential reading for all people working on biological databases both biologists and computer scientists It will also be of interest to all users of such databases including molecular biologists geneticists protein chemists clinicians and drug developers
