

Ch 14: Applying Extinction

- Extinction is one of the functional treatments used to eliminate a problem behaviour
- the basic principle of extinction is eliminating the identified reinforcer of the problem behaviour
- Steps in using extinction
 1. collect data to assess treatment effects
 - record the problem behaviour before and after the use of extinction to determine when the behaviour is increased/decreased after extinction has been established
 - establish a behavioural definition
 2. identify the reinforcer for the problem behaviour through functional assessment
 - you must identify the specific reinforcer for the problem behaviour so that you can eliminate it in an extinction procedure
 - in functional assessment the antecedent and consequence of the behaviour are identified
 - using this collection of data identify which antecedent and consequence is acting as an establishing operation and reinforcer
 3. eliminate the reinforcer after each instance of the problem behaviour
 - in order to eliminate it a few things must be considered
 - have you identified the reinforcer?
 - can you eliminate the reinforcer?
 - if the change agent has no control over the reinforcer, extinction can't be implemented
 - change agent = parent, teacher, staff, the person implementing the change
 - extinction can be implemented only if the change agent can prevent the reinforcing consequence each time the problem behaviour occurs
 - is extinction safe to use?
 - it's important to consider whether extinction will harm the person
 - can an extinction burst be tolerated?
 - an extinction burst is a slight increase in the problem behaviour before it declines
 - the change agent must be aware of the extinction burst, and must be able to withhold from reinforcing the behaviour
 - can consistency be maintained?
 - for extinction to be implemented correctly, the reinforcer must never follow the problem behaviour
 - meaning all people involved must be consistent in eliminating the behaviour
 - all change agents must be trained to use the procedure correctly

By Richard Stalling and Ronald Wasden of Bradley University, this study guide includes a review of key ideas, people, and terms, complete with fill-in-the-blank, short answer, and matching questions. This is followed by a self-quiz made up of multiple choice questions. The Study Guide is organized around learning objectives, those same learning objectives that are included in the test bank. Principles of Human Anatomy Gerard J. Tortora, 1995
Designed for introductory courses in human anatomy, this text assumes no previous study of the human body. Instead, this book helps to facilitate a basic understanding of this broad discipline by presenting data, unified concepts, and vocabulary in a manner that is easy for students to understand. Although the focus is on anatomy, links are made between structures and functions to help students understand anatomical concepts. The understanding of structure and function is further enhanced by considering defects and disorders in clinical settings. Organized by systems rather than regions, each chapter of this seventh edition has been revised. This text's coverage of the human anatomy is now complemented by new features including questions with figures, colour anatomy photographs, improved readability, phonetic
