ANSWER KEY

1. The first step in the scientific method is to observe a phenomenon. This is done by using the senses to notice something that is happening in the world around us. This is often done by asking questions. For example, a student may notice that the leaves on a tree are changing color and wonder why this is happening.

2. The second step in the scientific method is to make a hypothesis. This is a statement that tries to explain the phenomenon observed. For example, the student may hypothesize that the leaves are changing color because it is autumn. This hypothesis is then tested by conducting experiments. For example, the student may plant a tree in a pot and water it regularly to see if the leaves change color.
