Degenerate Nonlinear Diffusion Equations Angelo Favini,Gabriela Marinoschi,2012-05-08 The aim of these notes is to include in a uniform presentation style several topics related to the theory of degenerate nonlinear diffusion equations treated in the mathematical framework of evolution equations with multivalued m accretive operators in Hilbert spaces The problems concern nonlinear parabolic equations involving two cases of degeneracy More precisely one case is due to the vanishing of the time derivative coefficient and the other is provided by the vanishing of the diffusion coefficient on subsets of positive measure of the domain From the mathematical point of view the results presented in these notes can be considered as general results in the theory of degenerate nonlinear diffusion equations However this work does not seek to present an exhaustive study of degenerate diffusion equations but rather to emphasize some rigorous and efficient techniques for approaching various problems involving degenerate nonlinear diffusion equations such as well posedness periodic solutions asymptotic behaviour discretization schemes coefficient identification and to introduce relevant solving methods for each of them **Degenerate Nonlinear Diffusion Equations** Angelo Favini,Gabriela Marinoschi,2012-05-09 The aim of these notes is to include in a uniform presentation style several topics related to the theory of degenerate nonlinear diffusion equations treated in the mathematical framework of evolution equations with multivalued m accretive operators in Hilbert spaces The problems concern nonlinear parabolic equations involving two cases of degeneracy More precisely one case is due to the vanishing of the time derivative coefficient and the other is provided by the vanishing of the diffusion coefficient on subsets of positive measure of the domain From the mathematical point of view the results presented in these notes can be considered as general results in the theory of degenerate nonlinear diffusion equations However this work does not seek to present an exhaustive study of degenerate diffusion equations but rather to emphasize some rigorous and efficient techniques for approaching various problems involving degenerate nonlinear diffusion equations such as well posedness periodic solutions asymptotic behaviour discretization schemes coefficient identification and to introduce relevant solving methods for each of them Handbook of Differential Equations: Evolutionary Equations C.M. Dafermos,Eduard Feireisl,2004-08-24 This book contains several introductory texts concerning the main directions in the theory of evolutionary partial differential equations The main objective is to present clear rigorous and in depth surveys on the most important aspects of the present theory The table of contents includes W Arendt Semigroups and evolution equations Calculus regularity and kernel estimatesA Bressan The front tracking method for systems of conservation lawsE DiBenedetto J M Urbano V Vespri Current issues on singular and degenerate evolution equations L Hsiao S Jiang Nonlinear hyperbolic parabolic coupled systemsA Lunardi Nonlinear parabolic equations and systemsD Serre L1 stability of nonlinear waves in scalar conservation laws B Perthame Kinetic formulations of parabolic and hyperbolic PDE s from theory to numerics **The Porous Medium Equation** Juan Luis Vazquez,2006-10-26 The Heat Equation is one of the three classical linear partial

differential equations of second order that form the basis of any elementary introduction to the area of PDEs and only recently has it come to be fairly well understood In this monograph aimed at research students and academics in mathematics and engineering as well as engineering specialists Professor Vazquez provides a systematic and comprehensive presentation of the mathematical theory of the nonlinear heat equation usually called the Porous Medium Equation PME This equation appears in a number of physical applications such as to describe processes involving fluid flow heat transfer or diffusion Other applications have been proposed in mathematical biology lubrication boundary layer theory and other fields Each chapter contains a detailed introduction and is supplied with a section of notes providing comments historical notes or recommended reading and exercises for the reader *Lecture Notes in Pure and Applied Mathematics* ,1991 *A Stability Technique for Evolution Partial Differential Equations* Victor A. Galaktionov,Juan Luis Vázquez,2012-12-06 common feature is that these evolution problems can be formulated as asymptoti cally small perturbations of certain dynamical systems with better known behaviour Now it usually happens that the perturbation is small in a very weak sense hence the difficulty or impossibility of applying more classical techniques Though the method originated with the analysis of critical behaviour for evolu tion PDEs in its abstract formulation it deals with a nonautonomous abstract differ ential equation NDE 1 Ut A u C u t t 0 where u has values in a Banach space like an LP space A is an autonomous time independent operator and C is an asymptotically small perturbation so that C u t t as t 00 along orbits u t of the evolution in a sense to be made precise which in practice can be quite weak We work in a situation in which the autonomous limit differential equation ADE Ut A u 2 has a well known asymptotic behaviour and we want to prove that for large times the orbits of the original evolution problem converge to a certain class of limits of the autonomous equation More precisely we want to prove that the orbits of NDE are attracted by a certain limit set 2 of ADE which may consist of equilibria of the autonomous equation or it can be a more complicated object Dynamics of Continuous, Discrete & Impulsive Systems ,2003 Nonlinear Diffusion Problems Michiel Bertsch,1983 *Differential and Integral Equations* ,2008 *Nonlinear Mathematical Problems in Industry* ,1993 Discrete and Continuous Dynamical Systems ,2008 *Revista Matemática Iberoamericana* ,2003 **Nonlinear Systems of Partial Differential Equations** Anthony W.
