Crime Scene Bloodstain Pattern Analysis Workbook:

Crime Scene Bloodstain Pattern Analysis Workbook N. Leroy Parker, 2014 This workbook is designed to assist the Crime Scene Analyst Technician or Investigator in documenting bloodstained patterns that are located at the crime scene or on bloodstained items that are submitted for an analysis. It is also designed to assist the Crime Scene Analyst Technician or Investigator in reconstructing or analyzing a bloodstained crime scene or a bloodstained item for which a bloodstain pattern analysis is requested. The documentation could be accomplished with overall midrange photographs and close up photographs with 2 3 or 6 centimeter stick on tapes that should be placed in the center of each rectangular area. The documentation should also consist of notes and rough sketches with measurements. The close up photographs of the rectangular areas with the 2 3 or 6 inches stick on tapes that were placed in the center of those areas should be taken with a parallel film camera plane. The stick on tapes should be labeled according to the surface on which they would be placed. Example West wall of living room 1 ww of lr 1 and west wall of living room 2 ww of lr 2 etc. The number of close up photographs would be determined by the number of rectangular areas with the stick on tapes. Example At least ten 10 close up photographs should be taken if ten 10 stick on tapes were placed on the bloodstained surface. The bloodstain pattern reconstruction or analysis should be done by first recognizing and or identifying the many different types of patterns in a bloodstained scene or on a bloody item. The next step should involve the reconstruction of the points or areas of convergence and origin and then a determination of how the other patterns were most likely created. The workbook contains several tasks and assignments that would provide the student with the tools to accomplish the documentation and analysis. The Crime Scene Analyst Technician or Investigator after successfully completing the workbook workshop should be aware that 1 0 Single drops of blood in a crime scene or on an item were influenced by the surface from which the blood fell the volume the diameter the shape the impact angle the scalloping of the perimeter and the direction of travel of the dropped blood that impacted the target surface the volume the height from which the blood fell the texture of the target surface on which the blood fell the angle of the targeted bloodstained surface and the horizontal speed of the source that issued the blood 2 0 Numerous drops of blood in the same pattern in a crime scene or on an item were influenced by the force or the impact less than 25 feet per second dropped blood and cast off bloodstain 25 to 100 feet per second medium velocity bloodstain over 100 feet per second high velocity bloodstain projected blood arterial bleeding transfer of blood from one object to another contact or transfer bloodstains imprint bloodstains smears or swipes and wipes large volumes of blood splashed or pooled blood 3 0 The reconstruction or analysis of the points or areas of origin could be determined by strings scaled drawings or calculations. The interpretation of the other patterns non impact along with the Medical Examiner's autopsy report should allow the crime scene analyst technician or Investigator to complete a bloodstain pattern analysis report and if possible explain and or testify to the sequence of events that occurred at the crime scene

Crime Scene Processing and Investigation Workbook

Christine R. Ramirez, Casie L. Parish-Fisher, 2011-11-15 The work of a crime scene investigator requires stellar organizational skills and razor sharp attention to detail Developing these skills is best achieved through hands on training simulating actual case events Crime Scene Processing and Investigation Workbook takes students from the classroom to the field and into the lab to explore a range of scenarios they will likely encounter on the job Exercises presented in this practical handbook include assessing the scene crime scene photography and mapping fingerprint evidence documentation impression casting bloodstain pattern recognition and advanced techniques for scene processing The book also examines the actions of the initial responding officer highlights special scene considerations and describes the role of crime scene analysis and reconstruction Designed to complement Gardner s Practical Crime Scene Processing and Investigation this manual uses a consistent format throughout to ensure assimilation Each chapter begins with a list of key terms and provides learning outcomes that describe the goal of the chapter Tasks are then broken down into specific segments with objectives necessary materials and a concept overview provided to promote heightened focus on salient points in the chapter Post lab questions enable students to test their grasp of the material and sample worksheets are provided that can be duplicated and used in actual case scenarios By practicing the techniques described in this manual students will be ready when they encounter them for the first time on the job

Shooting (Trajectory) Reconstruction Workbook N. Leroy Parker, 2013-01-08 This workbook is designed to assist the Crime Scene Analyst Technician or Investigator in documenting any bullet holes and or indentations that may be present at the crime scene This documentation could be accomplished with overall midrange and close up photographs rough sketches with the required measurement and notes The workbook is also designed to assist the Crime Scene Analyst Technician or Investigator in understanding the different ways of determining a The upward inclined or downward sloped bullet impact angles to the horizontal plane and the horizontal bullet impact angles to the left or right when facing the surface with the bullet hole that would be needed to reconstruct the shooting incident b The approximate location s of the muzzle of the gun at the time of the shooting The determined or calculated bullet impact angle s to the horizontal plane could be used by the Crime Scene Analyst Technician or Investigator to determine the horizontal distance s below the path of the bullet and the distance s the bullet s traveled from the muzzle of the gun to the hole s in the victim or object These distances could then be used to determine calculate the location of the shooter for any known or assumed muzzle height s based on the orientation of the shooter Also having the horizontal bullet impact angle the Crime Scene Analyst Technician or Investigator could determine the perpendicular horizontal distance s from the muzzle of the gun to the surface with the bullet hole s and or indentation s A trajectory or shooting reconstruction could be accomplished by the utilization of one or more of the following methods The emphasis of this workbook would be on the reconstruction of crime scene shooting incidents utilizing these methods Strings and dowels rods Scaled drawings Calculations using the trigonometric ratios Computers programs The workbook would also provide the Crime Scene Analyst Technician or

Investigator with an opportunity to reconstruct and review fifteen real cases More emphasis was placed on solution of these cases which are located in the back of the book by calculations using the trigonometric ratios and the Pythagorean Theorem since this method could be utilized to verify the accuracy of the other methods Potentially very valuable investigative information could be developed through a trajectory or shooting reconstruction of the crime scene that would assist the Analyst Technician or Investigator when interviewing a subject to determine if he or she is truthful in the sequence of events or the manner in which the incident took place Specific information may be logically inferred if the Crime Scene Analyst Technician or Investigator is knowledgeable about trajectory or shooting reconstruction **Complete Crime Scene**
