

Interactions of Waves (cont.)

- Standing wave - wave appears not to move
 - nodes - locations of zero amplitude
 - antinodes - locations of maximum amplitude
 - *Demo - spring*
- Resonance - occurs when vibrations traveling through an object match the object's natural frequency
 - *Example - child on swing*

Chapter 15 Section 3 Wave Interactions Answers:

Shock Wave Interactions in General Relativity Jeffrey Groah, Joel Smoller, Blake Temple, 2007-04-03 This monograph presents a self contained mathematical treatment of the initial value problem for shock wave solutions of the Einstein equations in General Relativity It has a clearly outlined goal proving a certain local existence theorem Concluding remarks are added and commentary is provided throughout The author is a well regarded expert in this area

Nonlinear Optical Waves A.I. Maimistov, A.M. Basharov, 2013-03-09 A non linear wave is one of the fundamental objects of nature They are inherent to aerodynamics and hydrodynamics solid state physics and plasma physics optics and field theory chemistry reaction kinetics and population dynamics nuclear physics and gravity All non linear waves can be divided into two parts dispersive waves and dissipative ones The history of investigation of these waves has been lasting about two centuries In 1834 J S Russell discovered the extraordinary type of waves without the dispersive broadening In 1965 N J Zabusky and M D Kruskal found that the Korteweg de Vries equation has solutions of the solitary wave form This solitary wave demonstrates the particle like properties i e stability under propagation and the elastic interaction under collision of the solitary waves These waves were named solitons In succeeding years there has been a great deal of progress in understanding of soliton nature Now solitons have become the primary components in many important problems of nonlinear wave dynamics It should be noted that non linear optics is the field where all soliton features are exhibited to a great extent This book had been designed as the tutorial to the theory of non linear waves in optics The first version was projected as the book covering all the problems in this field both analytical and numerical methods and results as well However it became evident in the process of work that this was not a real task

Ponath, G. I. Stegeman, 1991 In recent years the physics of electromagnetic surface phenomena has developed rapidly evolving into technologies for communications and industry such as fiber and integrated optics The variety of phenomena based on electromagnetism at surfaces is rich and this book was written with the aim of summarizing the available knowledge in selected areas of the field The book contains reviews written by solid state and optical physicists on the nonlinear interaction of electromagnetic waves at and with surfaces and films Both the physical phenomena and some potential applications are dealt with Included are discussions of nonlinear wave mixing on films and surfaces second harmonic generation in waveguides and at surfaces nonlinear waves guided by dielectric and semiconductor surfaces and films surface gratings formed by high energy laser beams and reflection and transmission switching of strong beams onto nonlinear surfaces Chapters on light scattering from surface excitations and magnetic order disorder and orientational phase transitions complete this essential contribution to the modern optics literature
