Clinical Research From Discovery To Development:

Drug Discovery and Clinical Research SK Gupta, **Transforming Clinical Research in the United States** Institute of Medicine, Board on Health Sciences Policy, Forum on Drug Discovery, Development, and Translation, 2010-10-22 An ideal health care system relies on efficiently generating timely accurate evidence to deliver on its promise of diminishing the divide between clinical practice and research There are growing indications however that the current health care system and the clinical research that guides medical decisions in the United States falls far short of this vision The process of generating medical evidence through clinical trials in the United States is expensive and lengthy includes a number of regulatory hurdles and is based on a limited infrastructure The link between clinical research and medical progress is also frequently misunderstood or unsupported by both patients and providers The focus of clinical research changes as diseases emerge and new treatments create cures for old conditions As diseases evolve the ultimate goal remains to speed new and improved medical treatments to patients throughout the world To keep pace with rapidly changing health care demands clinical research resources need to be organized and on hand to address the numerous health care questions that continually emerge Improving the overall capacity of the clinical research enterprise will depend on ensuring that there is an adequate infrastructure in place to support the investigators who conduct research the patients with real diseases who volunteer to participate in experimental research and the institutions that organize and carry out the trials To address these issues and better understand the current state of clinical research in the United States the Institute of Medicine's IOM Forum on Drug Discovery Development and Translation held a 2 day workshop entitled Transforming Clinical Research in the United States The workshop summarized in this volume laid the foundation for a broader initiative of the Forum addressing different aspects of clinical research Future Forum plans include further examining regulatory administrative and structural barriers to the effective conduct of clinical research developing a vision for a stable continuously funded clinical research infrastructure in the United States and considering strategies and collaborative activities to facilitate more robust public engagement in the clinical research enterprise **Clinical Research from Discovery to Development** Dr K Ashish, Gaurav Goel, 2014-04-25 This book will serve as a pool of fundamentals and principles involved in Clinical Research with a primary focus on Drug development and clinical trial processes Good Clinical Practices GCP guidelines Drug regulatory affairs Roles and responsibilities of various clinical trial stakeholders etc The objective of this book is to provide high end training and knowledge about clinical research from discovery to development **Envisioning a Transformed Clinical Trials Enterprise for 2030: Proceedings of a Workshop** National Academies Of Sciences Engineering, National Academies of Sciences Engineering and Medicine, Health And Medicine Division, Board On Health Sciences Policy, Forum on Drug Discovery Development and Translation, 2022-08-09 The evolution of health care is expanding the possibilities for integration of clinical research into the continuum of clinical care new approaches are enabling the collection of data in real

world settings and new modalities such as digital health technologies and artificial intelligence applications are being leveraged to overcome challenges and advance clinical research. At the same time, the clinical research enterprise is strained by rising costs, varying global regulatory and economic landscapes, increasing complexity of clinical trials, barriers to recruitment and retention of research participants, and a clinical research workforce that is under tremendous demands. Looking ahead to 2030, the Forum on Drug Discovery, Development and Translation of the National Academies of Sciences, Engineering, and Medicine convened a public workshop for stakeholders from across the drug research and development life cycle to reflect on the lessons learned over the past 10 years and consider opportunities for the future. The workshop was designed to consider goals and priority action items that could advance the vision of a 2030 clinical trials enterprise that is more efficient, effective, person-centered, inclusive, and integrated into the health care delivery system so that outcomes and experiences for all stakeholders are improved. This Proceedings of a Workshop summarizes the presentations and discussions that took place during the four-part virtual public workshop held on January 26, February 9, March 24, and May 11, 2021.

Sharing Clinical Research Data Forum on Drug Discovery, Development, and Translation, Forum on Neuroscience and Nervous System Disorders, National Cancer Policy Forum, Roundtable on Translating Genomic-Based Research on Health, Board on Health Sciences Policy, Board on Health Care Services, Institute of Medicine, 2013-05-21

Pharmaceutical companies academic researchers and government agencies such as the Food and Drug Administration and the National Institutes of Health all possess large quantities of clinical research data If these data were shared more widely within and across sectors the resulting research advances derived from data pooling and analysis could improve public health enhance patient safety and spur drug development Data sharing can also increase public trust in clinical trials and conclusions derived from them by lending transparency to the clinical research process Much of this information however is never shared Retention of clinical research data by investigators and within organizations may represent lost opportunities in biomedical research Despite the potential benefits that could be accrued from pooling and analysis of shared data barriers to data sharing faced by researchers in industry include concerns about data mining erroneous secondary analyses of data and unwarranted litigation as well as a desire to protect confidential commercial information Academic partners face significant cultural barriers to sharing data and participating in longer term collaborative efforts that stem from a desire to protect intellectual autonomy and a career advancement system built on priority of publication and citation requirements Some

barriers like the need to protect patient privacy present challenges for both sectors. Looking ahead, there are also a number of technical challenges to be faced in analyzing potentially large and heterogeneous datasets. This public workshop focused on strategies to facilitate sharing of clinical research data in order to advance scientific knowledge and public health. While the workshop focused on sharing of data from preplanned interventional studies of human subjects, models and projects involving sharing of other clinical data types were considered to the extent that they provided lessons learned and best practices. The workshop objectives were to examine the benefits of sharing of clinical research data from all sectors and among these sectors, including for example, benefits to the research and development enterprise and benefits to the analysis of safety and efficacy.

Sharing Clinical Research Data Workshop Summary identifies barriers and challenges to sharing clinical research data, explores strategies to address these barriers and challenges, including identifying priority actions and low hanging fruit, opportunities and discusses strategies for using these potentially large datasets to facilitate scientific and public health advances. *New Drug Development* J. Rick Turner, 2007-07-27. This book acquaints students and practitioners in the related fields of pharmaceutical sciences, clinical trials and evidence based medicine with the necessary study design concepts and statistical practices to allow them to understand how drug developers plan and evaluate their drug development. Two goals of the book are to make the material accessible to readers with minimal background in research and to be straightforward enough for self taught purposes. By bringing the topic from the early discovery phase to clinical trials and medical practice, the book provides an indispensable overview of an otherwise confusing and fragmented set of topics. The author's experience as a respected scientist, teacher of statistics and one who has worked in the clinical trials arena makes him well suited to write such a treatise.

Virtual Clinical Trials National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Forum on Drug Discovery, Development, and Translation, 2019-10-16. Successful drug development relies on accurate and efficient clinical trials to deliver the best and most effective pharmaceuticals and clinical care to patients. However, the current model for clinical trials is outdated, inefficient and costly. Clinical trials are limited by small sample sizes that do not reflect variations among patients in the real world, financial burdens on participants and slow processes, and these factors contribute to the disconnect between clinical research and clinical practice. On November 28-29, the National Academies of Sciences, Engineering and Medicine convened a workshop to investigate the current clinical trials system and explore the potential benefits and challenges of implementing virtual clinical trials as an enhanced alternative for the future. This publication summarizes the presentations and discussions from the workshop.
