Koch** ,2011 **Computer Science for Middle School (CS4MS): How Middle School Administrators and Teachers Implement Computer Science Curricula** Verjinia Mayer,2019 Computer science education in K 12 schools is a popular topic of study especially in quantitative research Many findings concur that computer science education should be introduced at lower grade levels to provide students with early exposure to computing skills or computational thinking more broadly While there is substantial research about computer science education implementation at the elementary and high school levels However there is a paucity of qualitative research about computer science curriculum implementation at the middle school level The current case study concentrated on the computer science implementation stories of six teachers and six administrators at six middle schools in a large urban public school district with a large number of socioeconomically disadvantaged and traditionally underrepresented minority students Through the theoretical framework of diffusion of innovation in organizations the study investigated the essential elements of a computer science curriculum implementation as well as the essential elements of sustaining a computer science education implementation The study also focused on the challenges of computer science education implementation and how the challenges if any varied by student population Lastly the study sought data on solutions to implementation challenges and how solutions if any varied by student population Study findings show that when middle school teachers do not receive computer science curriculum training their implementation of the curriculum does not reach the higher stages of diffusion such as redefining clarifying and routinizing Results also indicate that the middle school computer science teacher s dedication to and enthusiasm for teaching the subject is essential to sustaining the implementation Furthermore when the

administrator and teacher in charge of computer science education are both committed to the implementation then they are more likely to exhibit a problem solving mindset Challenges to implementing a middle school computer science curriculum include securing funding for training to teach the curriculum in addition to finding enthusiastic teachers to teach the topic A further challenge was the lack of teacher support from administrators who were not completely sold on any particular computer science curriculum or plan of implementation Challenges pertaining to students include teachers not having any assistance with special education students who are not necessarily ready for a computer science classroom environment Teachers also expressed challenges in terms of student behavior and students reluctance to work in teams especially when there is not enough equipment for every student Solutions to the funding challenge that worked for participants of the study included continuous fundraising and grantwriting Administrators who were more dedicated to implementing computer science education at their middle schools had all read research about the importance of early exposure to computer science opportunities as well as project based learning curricula Solutions related to special education students and others who were not ready for the advanced curriculum included having multiple levels of the work available for students to feel challenged at their level Teacher enthusiasm and ability to teach CS can be found among existing middle school teachers Administrators who are informed about middle school CS education are in a better position to make teacher centered and student centered decisions about CS implementation When administrators visions of CS implementation align with the middle school teacher s vision of CS implementation the social network that is generated by the administrator and CS teacher working collaboratively makes a CS program more sustainable The alignment of middle school CS education research with existing research about diffusion of innovations makes these insights more accessible Consequently the implementation of middle school CS education can be better understood by using the five stages of diffusion of innovations as a theoretical framework
