

The characteristics of living things

Living things maintain a stable internal environment.

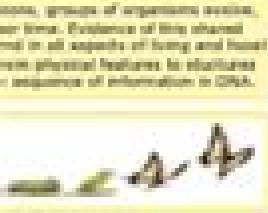

Organisms need to keep their internal environment relatively stable.

Living things obtain and use material and energy.

Organisms must take in material and energy to grow, develop, and reproduce.

Taken as a group, living things create...

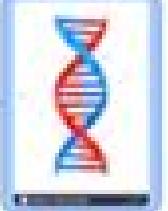

Organisms are composed of one or more cells. Despite their small size, cells are complex and highly organized.

Living things are made up of cells.

Living things are based on a universal genetic code.

All organisms share the same genetic code. They need to live, grow and reproduce. That information is passed on from one to another.

Living things grow and develop.

Living things respond to their environment.

Organisms detect and respond to changes in their environment.

Living things reproduce.

Parents have similar organisms. Most, and probably all, engage in sexual reproduction. Cells from two parents join to form the first cell. As a result, in which a single organism produces identical to itself.
