Indonesia Jatna Supriatna, Ralph Lenz, 2022-10-19 The climate change threat at present has reached a critical stage The development of the world today is threatened as the whole world including Indonesia is facing three crisis namely the economic crisis post COVID 19 Pandemic energy crisis caused by the war in Ukraine and lastly the climate crisis Many world leaders are unaware of the severity of the threat of climate change which has now transformed into a climate crisis The derivative of the climate crisis will not only contribute to worsening of the economic crisis and energy crisis but will quickly shifted into a biodiversity catastrophe drinking water scarcity and the global hunger crisis In turn a political crisis might arose in the form of a denial of the government s authority which was deemed unable to overcome these crises This bleak picture requires a thorough study and solution that is effective but at the same time reaches sustainability and penetrates the future We are blessed to read Prof Jatna and Prof Lenz s Masterpiece Magnus Opus in the form of a book with more than 600 pages that relate to these problems and crises in a series of meanings We should salute them for providing a clear and comprehensive picture of the interrelationships between regions disciplines and elements both in terms of origin and the possibility of solving the problem The presentation is presented comprehensively without letting go of the details and context regarding sustainability and the global picture I am sure that many people especially those in a strong position can benefit and be given references from the essential things presented in this book the great work of both authors which I am proud of Prof Rachmat Witoelar Indonesia s President s Special Envoy for Climate Change 2015 2019 and advisor to I SER UI and CAIPSDCC The concept of sustainable development is a development concept that ensures the fulfillment of the human needs of the present generation without compromising the ability of future generations to meet their needs That is the idea of sustainable development emphasizes the development of technologies that can increase productivity and reduce the level of damage The concept of sustainable development is an effort to integrate three aspects of life namely social economic and environmental in a synergistic relationship supported by infrastructure and institutions This concept is in line with the avoidance of shell game theory where shell game theory solves the problem by creating another problem The book written by Prof Jatna Supriatna and his colleague Prof Ralph Lenz from the United States on environmentally sustainable development in Indonesia is very well written It suits students environmental experts planning bureaucrats and legislature members Plus those who are doing development planning both at home and abroad Each environmental problem is described in detail and clarity and the solution options are given so that sound environmental management can be sustainable Prof Satryo Brodjonegoro President of Indonesian Academy of Sciences Indonesia is an archipelago country that harbors natural resources It is among the countries with the most complete and extensive natural resource base perhaps trailing only Brazil Still using natural resources as input for current production processes has increased yearly depletion With its abundant natural resources Indonesia should have become a prosperous country from an economic perspective But yearly rising levels of natural resource depletion in many regions of the country have occurred without an increase in equitable human welfare

those words that I picked up from Prof Jatna Supriatna and his friend's book I support this book's aim that environmental sustainability is necessary for Indonesia. This book should be read not only by students, Environment NGOs and lecturers but also decision makers. Dede Djuhana Ph.D. Dean of Faculty of Mathematics and Natural Sciences Universitas Indonesia

Environmental Management in Development Michael E. Colby, 1990 In the past quarter century environmental management has increasingly become a concern of governments More recently the traditional split between developers and conservationists has begun to break down Conceptions of what is economically and technologically practical ecologically necessary and politically feasible are rapidly changing This report discusses the implications of five paradigms of environmental management in development The author notes that the remedial legalistic approach of environmental management is breaking down Instead interest in the more economically integrated approach of resource management has recently taken hold Several interdependent forces indicate that improving the economic management of pollution and resources may be a necessary but insufficient measure to create the conditions for sustainable development The perception of tradeoffs between development and environmental quality persists in the present debate but its necessity is greatly exaggerated according to this paper Finally it is noted that paradigms may be impervious to evidence and institutions and societies too difficult to change Whether when and how these issues are resolved may be modern civilization s most significant test

Sustainability Management And Business Strategy In Asia Katsuhiko Kokubu, Yoshiyuki Nagasaka, 2019-10-15. Sustainability is a concept that unifies the environment, economy, and society and has spread as a key concept in enterprise management. The United Nations adopted the Sustainable Development Goals (SDGs) in 2015, which require worldwide efforts to reach a sustainable society and also applies to private enterprises. Sustainability should be developed in connection with management strategy, and Asia's role, including that of Japan, is important to improve global sustainability. This book addresses how sustainability management in the Asian context is currently practised and proposes practices for the future. Investigation of the effect of business domain characteristics on the integration of sustainability and management and elucidation of the process and features of EMCS. Environmental Management Control System inside and outside of companies have been indicated. The book points that companies need to use and design Sustainability Management Control Systems in order to implement a CSR (Corporate Social Responsibility) strategy and match employees' behavior to CSR activities. MFCA (Material Flow Cost Accounting) has started to expand rapidly into other Asian industries from Japan as a method of Environmental Management Control. The fundamental idea and procedure of MFCA and many case examples of Japanese MFCA have been reported. These findings help us to consider a policy for continuous use of MFCA. Moreover, the relationship between Toyota Production System and MFCA has been explained, and Material Flow Time Costing as a new management accounting concept is proposed. Based on the literature review, the study has made recommendations for Asian companies' strategic management and governmental policy making to improve both quality and quantity of sustainability disclosure in Asia. One of the papers has identified the development and

implementation of social and environmental accounting by Indonesian state owned enterprises and their determining factors In a Japanese manufacture the effect of smoothed production has been analyzed as an example of environmental management This led to an increase in production quality without additional capital spending
