The use of such revetments on river canal banks is also considered briefly. Guidelines are discussed for preparing designs for new revetments. Methods are also given for checking existing revetments. The manual is aimed at the practical application of the result of basic research into block pitching. Pitched dike revetments include following revetments systems: Basalt and other natural rock, Concrete blocks, column and other small cement concrete elements and Block mattresses.

However, to date, no standard abutment designs have been developed. Thus, there was a need to establish an easy-to-use design methodology in addition to generating generic abutment standards and other design aids for the more common substructure systems used in Iowa. The final report for this project consists of three volumes. The first volume summarizes the research completed in this project. The second volume introduces and outlines the use of the various design aids developed for this project. The third volume provides two sets of calculations that demonstrate the application of the substructure design methodology developed in this project. These calculations also verify the accuracy of the foundation design template.
