### Heterogenous Computational Intelligence in Internet of Things Pawan Singh,Prateek Singh,Pramod Kumar

Mishra,Avimanyu K. Vatsa,2023-10-26 We have seen a sharp increase in the development of data transfer techniques in the networking industry over the past few years We can see that the photos are assisting clinicians in detecting infection in patients even in the current COVID 19 pandemic condition With the aid of ML AI medical imaging such as lung X rays for COVID 19 infection is crucial in the early detection of many diseases We also learned that in the COVID 19 scenario both wired and wireless networking are improved for data transfer but have network congestion An intriguing concept that has the ability to reduce spectrum congestion and continuously offer new network services is providing wireless network virtualization The degree of virtualization and resource sharing varies between the paradigms Each paradigm has both

technical and non technical issues that need to be handled before wireless virtualization becomes a common technology For wireless network virtualization to be successful these issues need careful design and evaluation Future wireless network architecture must adhere to a number of Quality of Service QoS requirements Virtualization has been extended to wireless networks as well as conventional ones By enabling multi tenancy and tailored services with a wider range of carrier frequencies it improves efficiency and utilization In the IoT environment wireless users are heterogeneous and the network state is dynamic making network control problems extremely difficult to solve as dimensionality and computational complexity keep rising quickly Deep Reinforcement Learning DRL has been developed by the use of Deep Neural Networks DNNs as a potential approach to solve high dimensional and continuous control issues effectively Deep Reinforcement Learning techniques provide great potential in IoT edge and SDN scenarios and are used in heterogeneous networks for IoT based management on the QoS required by each Software Defined Network SDN service While DRL has shown great potential to solve emerging problems in complex wireless network virtualization there are still domain specific challenges that require further study including the design of adequate DNN architectures with 5G network optimization issues resource discovery and allocation developing intelligent mechanisms that allow the automated and dynamic management of the virtual communications established in the SDNs which is considered as research perspective

**Rock Mechanics** M. Abbie,2009

Rock mechanics is the theoretical and applied science of the mechanical behaviour of rock and rock masses Rock mechanics as applied in mining petroleum and civil engineering practice is concerned with the application of the principles of engineering mechanics to the design of the rock structures This book examines the hydraulic characterisation of fractured rocks with specific reference to the fluid flow in single fractures the interpretation of hydraulic tests the geometrical characterisation and modelling of fracture networks An appropriate model for the fluid flow and transport in fractured formations is based on these items Indications are also given about the best strategy to undertake in order to set up this model This book develops the conditions criteria basic approaches and test case results for establishing the elastic compliance tensor hydraulic permeability tensor and numerical techniques for investigating stress effect on hydraulic behaviour of fractured rocks The correlation between the fracture aperture and size represented by trace length is also examined In addition the role of CO<sub>2</sub> saturated water on the fracturing behaviour of rock samples and the geomaterials geotechnical parameter changes after subjection to environmental solutions are examined
