## Conceptual Problems Of Quantum Gravity Einstein Studies:

**Conceptual Problems of Quantum Gravity** Abhay Ashtekar,John Stachel,1991-01-01      *Conceptual Problems of Quantum Gravity* Abhay Ashtekar,1991-01-01      **The Universe of General Relativity** A.J. Kox,Jean Eisenstaedt,2006-09-10

A century ago in 1905 Albert Einstein published *On the Electrodynamics of Moving Bodies* in which the foundations were laid for the Special Theory of Relativity. Ten years later his relativistic theory of gravitation and the General Theory of Relativity appeared. Fifty years ago Einstein passed away in Princeton. In the 1980s John Stachel then Editor of the *Collected Papers of Albert Einstein* brought together a group of historians, philosophers, physicists and mathematicians who had one thing in common: a lively interest in the history and foundations of the theories of relativity. At a meeting in 1986 at Osgood Hill this group met for the first time to discuss the prehistory, development, reception and other aspects of relativity. It was the beginning of a valuable tradition. Since then every three or four years a meeting has been organized during which historical and foundational issues in general and special relativity have been discussed. Osgood Hill was followed by Luminy in 1988. Then came Johnstown 1991, Berlin 1995, Notre Dame 1999 and finally Amsterdam 2002, the proceedings of which are presented in this volume, supplemented with some papers from the preceding meeting. Once again these articles clearly show that an historical approach can lead to new insights into the development and elaboration of relativity. The prehistory of special relativity and an early attempt at a relativistic theory of gravitation are covered in papers by John Stachel and Shaul Katzir respectively.      *Towards a Theory of Spacetime Theories* Dennis Lehmkuhl, Gregor Schiemann, Erhard Scholz, 2017-01-05. This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world wide experts from physics, philosophy and history in order to address a set of questions first posed in the 1950s: How do we compare spacetime theories? How do we judge objectively which is the best theory? Is there even a unique answer to this question? The goal of the workshop and of this book is to contribute to the development of a meta theory of spacetime theories. Such a meta theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences, deliver a framework for a class of theories that could be helpful as a blueprint to build other meta theories and provide a higher level viewpoint for judging which theory most accurately describes nature. But rather than drawing a map in broad strokes, the focus is on particularly rich regions in the space of spacetime theories. This work will be of interest to physicists as well as philosophers and historians of science working with or interested in General Relativity and/or Space Time and Gravitation more generally.      **Revisiting the Foundations of Relativistic Physics** Ashtekar, 2011-06-28. This book is for physicists, historians and philosophers of physics as well as students seeking an introduction to ongoing debates in relativistic and quantum physics. This title is unique in that it comprises contributions by leading physicists, philosophers and historians of science. It covers the recent debates on the emergence of relativity and quantum theory. It includes chapters with an

introductory character comprehensible to students and science teachers it can be used in graduate level courses in the history and philosophy of science it strengthens the bonds between the communities of scientists historians and philosophers

**Symmetry, Structure, and Spacetime** Dean Rickles,2008 In this book Rickles considers several interpretative difficulties raised by gauge type symmetries those that correspond to no change in physical state The ubiquity of such symmetries in modern physics renders them an urgent topic in philosophy of physics Rickles focuses on spacetime physics and in particular classical and quantum general relativity Here the problems posed are at their most pathological involving the apparent disappearance of spacetime Rickles argues that both traditional ontological positions should be replaced by a structuralist account according to which relational structure is what the physics is about Unified treatment of gauge symmetries and their relationship to ontology in physics Brings philosophy of space and time into step with developments in modern physics Argues against the received view on the implications of symmetries in physics Provides elementary treatments of technical issues Illustrates a novel defense of structuralism [Einstein and the History of General Relativity](#) Don Howard,John Stachel,1989 Based upon the proceedings of the First International Conference on the History of General Relativity held at Boston University s Osgood Hill Conference Center North Andover Massachusetts 8 11 May 1986 this volume brings together essays by twelve prominent historians and philosophers of science and physicists The topics range from the development of general relativity John Norton John Stachel and its early reception Carlo Cattani Michelangelo De Maria Anne Kox through attempts to understand the physical implications of the theory Jean Eisenstaedt Peter Havas and to quantize it Peter G Bergmann to elaborations of the theory into a unified theory of electromagnetism and gravitation Vladimir P Vizgin Michel Biezunski and considerations of its cosmological extensions Pierre Kerszberg George F R Ellis This is the first volume to survey many of the most important questions in the history of general relativity with many of the contributions drawing upon such original resources as the Einstein Archive It is hoped that it will stimulate much needed further research in this hitherto neglected area [Fourteenth Texas Symposium on Relativistic Astrophysics](#) Ervin J. Christoph Lehner,Jürgen Renn,Matthias Schemmel,2012-02-02 This volume reviews conceptual conflicts at the foundations of physics now and in the past century The focus is on the conditions and consequences of Einstein s pathbreaking achievements that sealed the decline of the classical notions of space time radiation and matter and resulted in the theory of relativity Particular attention is paid to the implications of conceptual conflicts for scientific views of the world at large thus providing the basis for a comparison of the demise of the mechanical worldview at the turn of the 20th century with the challenges presented by cosmology at the turn of the 21st century Throughout the work Einstein s contributions are not seen in isolation but instead set into the wider intellectual context of dealing with the problem of gravitation in the twilight of classical physics the investigation of the historical development is carried out with a number of epistemological questions in mind concerning in particular the transformation process of knowledge associated with the changing worldviews of physics
