with IBM Cognos BI Dynamic Query Blog post IBM Cognos Dynamic Query Extensibility **IBM Cognos Business Intelligence V10.1: Intelligence Unleashed** Dean Browne,IBM Redbooks,2010-10-25 Organizations are pressured constantly to understand and react quickly to information In addition the complexity and volumes of data for all aspects of the environments in which organizations operate is increasing Markets regulatory environments customer and supplier data competitive information and internal operational information all impact how data is viewed and interpreted With a capable and efficient business intelligence BI solution all levels of an organization can receive information how when and where they need it to make faster and better aligned decisions Every user can have access to all the capabilities of the BI solution and often organizations can determine a user's business need to access information using typical characteristics that are defined by that user's role Many organizations often satisfy this complexity and these diverse demands with a number of point solutions With IBM Cognos Business Intelligence BI you can satisfy needs throughout the user community and ensure that everyone can work and collaborate from a consistent set of data In addition IT is simplified with fewer components to deploy manage and maintain Organizations need to make the most of a workforce that is increasingly driven to multi task network and collaborate IBM Cognos BI delivers analytics that everyone in the organization can use to answer key business questions This IBM RedguideTM publication highlights features of IBM Cognos BI version 10.1 *Co-locating Transactional and Data Warehouse Workloads on System z* Mike Ebbers,Dino Tonelli,Jason Arnold,Patric Becker,Yuan-Chi Chang,Willie Favero,Shantan Kethireddy,Nin Lei,Shirley Lin,Ron Lounsbury,Susan Widing Lynch,Cristian Molaro,Deepak Rangarao,Michael Schapira,IBM Redbooks,2010-12-03 As business cycles speed up many customers gain significant competitive advantage from quicker and more accurate business decision making by using real data For many customers choosing the path to co locate their transactional and analytical workloads on System z better leverages their existing investment in hardware software and skills We created a project to address a number of best practice questions on how to manage these newer analytical type workloads especially when co located with traditional transactional workloads The goal of this IBM Redbooks publication is to provide technical guidance and performance trade offs associated with resource management and potentially DB2 data sharing in a variety of mixed transactional data warehouse System z topologies The term co location used here and in the rest of the book is specifically defined as the practice of housing both transactional OLTP and data warehouse analytical workloads within the same System z configuration We also assumed that key portions of the transactional and data warehouse databases would reside on DB2 for z OS The databases may or may not reside in a DB2 data sharing environment we discuss those pros and cons in this book The intended audience includes DB2 data warehouse architects and practitioners who are facing choices in resource management and system topologies in the data warehouse arena This specifically includes Business Intelligence BI administrators DB2 database administrators DBAs and z OS performance administrators systems programmers In addition decision makers and architects can utilize this book to assist in

making platform and database topology decisions. The book is divided into four parts. Part I Introducing the co location project covers the System z value proposition and why one should consider System z as the central platform for their data warehousing business analytics needs. Some topics are risk avoidance via data consolidation, continuous availability, simplified disaster recovery, IBM Smart Analytics Optimizer, reduced network bandwidth requirements, and the unique virtualization and resource management capabilities of System z LPAR z VM and WLM. Part I also provides some of the common System z co location topologies along with an explanation of the general pros and cons of each. This would be useful input for an architect to understand where a customer is today and where they might consider moving to. Part II Project environment covers the environment products, workloads, workload drivers, and data models implemented for this study. The environment consisted of a logically partitioned z10TM 32way running z VM Linux and z OS operating system instances. On those instances we ran products such as z OS DB2 V9, IBM Cognos Business Intelligence Version 8.4 for Linux on System z, InfoSphereTM Warehouse for System z, InfoSphere Change Data Capture z OS, WebSphere V7, Tivoli Omegamon for DB2 Performance expert. Utilizing these products we created transactional OLTP data warehouse query and data warehouse refresh workloads. All the workloads were based on an existing web based transactional Bookstore workload that is currently utilized for internal testing within the System p and z labs. While some IBM Cognos BI and ISWz product usage and experiences information is covered in this book we do not go into the depth typically found in IBM Redbooks publications since there is another book focused specifically on that. *IBM ILOG ODM Enterprise and Data Integration* Amtul Aziz, Shelley L. Crayon, Ioannis Gamvros, Vasfi Gucer, Joseph J. Lee, Martin Shell, IBM Redbooks, 2011-06-10. IBM ILOG ODM Enterprise is a platform to implement and deploy corporate custom solutions for optimization based planning and scheduling. Developing a realistic plan or schedule that provides the best possible balance between customer service and revenue goals is hard work. With ILOG ODM Enterprise business leaders can make better decisions through what if analysis, scenario management and collaboration. This IBM RedpaperTM publication showcases the optimization scenario of the Supply Demand application for ILOG ODM Enterprise. This scenario highlights the product features. It includes suggested practices for using IBM Cognos and InfoSphereTM offerings to extract data and build reports with ILOG ODM Enterprise driving the import and export of data. The target audience for this paper is IT specialists and IT architects who implement ILOG ODM Enterprise solutions and decision makers such as IT managers. **InfoSphere Warehouse: Cubing Services and Client Access Interfaces** Chuck Ballard, Deepak Rangarao, Jimmy Tang, Philip Wittann, Zach Zakharian, Andy Perkins, Robert Frankus, IBM Redbooks, 2008-12-16. Formerly known as DB2 Warehouse, InfoSphereTM Warehouse enables a unified, powerful data warehousing environment. It provides access to structured and unstructured data as well as operational and transactional data. In this IBM Redbooks publication we provide a brief overview of InfoSphere Warehouse but the primary objective is to discuss and describe the capabilities of one particular component of the InfoSphere Warehouse which is InfoSphere

Warehouse Cubing Services InfoSphere Warehouse Cubing Services is designed to provide a multidimensional view of data stored in relational databases for significantly improved query and analysis capabilities For this there are particular schema designs that are typically used for these data warehouse and data mart databases called dimensional or cube models Optimization techniques are used to dramatically improve the performance of the OLAP queries which are a core component of data warehousing and analytics InfoSphere Warehouse Cubing Services works with business intelligence BI tools and clients such as Cognos Alphablox and Microsoft Excel through client interfaces to accelerate OLAP queries from many data sources We describe these interfaces and provide examples of how to use them to improve the performance of your OLAP queries
