MACHINE LEARNING FOR DATA SCIENCE - USING ML ALGORITHMS FOR PREDICTIVE MODELING Dilip Siddareddy,Dr. Haewon Byeon,Purvi Makwana,Dr. Vaibhav Bhatnagar,2023-10-30 Because of the advancements that have been made in machine learning the world is being changed in ways that are difficult to conceive If you stop for a second and take a good look around you ll see that the area of data science is everywhere you turn Take for example Alexa from Amazon she is an artificial intelligence that has been developed to be as simple and straightforward to use as is humanly conceivable There are many other digital assistants similar to Alexa such as Google Assistant Cortana and so on Alexa is not the only one of its sort Therefore the question of why they were formed in the first place is the most crucial one to ask the question of how they developed is the second most important one to ask In any event we are going to make an attempt to study each and every one of these issues and we are also going to make an effort to devise answers that are both logical and technological in nature Within the scope of this

discussion the question that has to be inquired about first and foremost is What exactly are Machine Learning and Data Science A widespread misconception is that data science and machine learning are interchangeable terms for the same thing Those people do have a point to some extent considering that data science is nothing more than taking a huge amount of data and analyzing it using a variety of machine learning approaches methodologies and technologies Therefore in order to become an expert in data science you need to have a solid understanding of mathematics and statistics in addition to a profound comprehension of the area that you intend to specialize in To be more specific what does it mean to have subject expertise Subject expertise is nothing more than the knowledge necessary about a given topic in order to be able to abstract and calculate the data that pertains to that field as the name of this type of expertise indicates In a nutshell these three concepts are considered as the foundations of data science and if you are successful in mastering all of them then you should rejoice yourself because you have achieved the level of an A level data scientist
