Mining X A. Zanasi,Nelson F. F. Ebecken,C. A. Brebbia,2009 Since the end of the Cold War the threat of large scale wars has been substituted by new threats terrorism organised crime trafficking smuggling proliferation of weapons of mass destruction To react to them a security strategy is necessary but in order to be effective it requires several instruments including technological tools Consequently research and development in the field of security is proving to be an ever expanding field all over the world Data mining is seen more and more not only as a key technology in business engineering and science but as one of the key features in security To stress that all these technologies must be seen as a way to improve not only the security of citizens but also their freedom special attention will be given to data protection research issues The 10th International Conference on Data Mining is part of the successful series and the topics include Text mining and text analytics Data mining applications Data mining methods *Forthcoming Books* Rose Arny,1998 *Measurement for the Social Sciences* John R. Rossiter,2010-11-25 This book proposes a revolutionary new theory of construct measurement called

C OAR SE for the social sciences The acronym is derived from the following key elements construct definition object representation attribute classification rater entity identification selection of item type enumeration and scoring The new theory is applicable to the design of measures of constructs in Management Marketing Information Systems Organizational Behavior Psychology Sociology C OAR SE is a rationally rather than empirically based theory and procedure It can be used for designing measures of the most complex and also the most basic constructs that we use in social science research C OAR SE is a radical alternative to the traditional empirically based psychometric approach and a considerable amount of the book's content is devoted to demonstrating why the psychometric approach does not produce valid measures The book argues that the psychometric approach has resulted in many misleading findings in the social sciences and has led to erroneous

acceptance or rejection of many of our main theories and hypotheses and that the C OAR SE approach to measurement would correct this massive problem The main purpose of this book is to introduce and explain C OAR SE construct measurement theory in a way that will be understood by all social science researchers and that can be applied to designing new more valid measures Featuring numerous examples practical applications end of chapter questions and appendices the book will serve as an essential resource for students and professional researcher alike
