*Multi-body Dynamic Modeling of Multi-legged Robots* Abhijit Mahapatra, Shibendu Shekhar Roy, Dilip Kumar Pratihari, 2020-02-27 This book describes the development of an integrated approach for generating the path and gait of realistic hexapod robotic systems. It discusses in detail locomotion with straight ahead crab and turning motion capabilities in varying terrains like sloping surfaces, staircases and various user defined rough terrains. It also presents computer simulations and validation using Virtual Prototyping (VP) tools and real world experiments. The book also explores improving solutions by applying the developed nonlinear constrained inverse dynamics model of the system formulated as a coupled dynamical problem based on the Newton Euler NE approach and taking into account realistic environmental conditions. The approach is developed on the basis of rigid multi body modelling and the concept that there is no change in the configuration of the system in the short time span of collisions. *SolidWorks 2007 for Designers* Sham Tickoo, Deepak Maini, 2007
