business application software suite In most cases companies that adopt SAP software remain heterogeneous enterprises running both SAP and non SAP systems to support their business processes Regardless of the specific scenario in heterogeneous enterprises most SAP implementations must be integrated with a variety of non SAP enterprise systems Portals Messaging infrastructure Business process management BPM tools Enterprise Content Management ECM methods and tools Business analytics BA and business intelligence BI technologies Security Systems of record Systems of engagement The tooling included with SAP software addresses many needs for creating SAP centric environments However the classic approach to implementing SAP functionality generally leaves the business with a rigid solution that is difficult and expensive to change and enhance When SAP software is used in a large heterogeneous enterprise environment SAP clients face the dilemma of selecting the correct set of tools and platforms to implement SAP functionality and to integrate the SAP solutions with non SAP systems This IBM Redbooks publication explains the value of integrating IBM software with SAP solutions It describes how to enhance and extend pre built capabilities in SAP software with best in class IBM enterprise software enabling clients to maximize return on investment ROI in their SAP investment and achieve a balanced enterprise architecture approach This book describes IBM Reference Architecture for SAP a prescriptive blueprint for using IBM software in SAP solutions The reference architecture is focused on defining the use of IBM software with SAP and is not intended to address the internal aspects of SAP components The chapters of this book provide a specific reference architecture for many of the architectural domains that are each important for a large enterprise to establish common strategy efficiency and balance The majority of the most important architectural domain topics such as integration process optimization master data management mobile access Enterprise Content Management business intelligence DevOps security systems monitoring and so on are covered in the book However there are several other architectural domains which are not included in the book This is not to imply that these other architectural domains are not important or are less important or that IBM does not offer a solution to address them It is only reflective of time constraints available resources and the complexity of assembling a book on an extremely broad topic Although more content could have been added the authors feel confident that the scope of architectural material that has been included should provide organizations with a fantastic head start in defining their own enterprise reference architecture for many of the important architectural domains and it is hoped that this book provides great value to those reading it This IBM Redbooks publication is targeted to the following audiences Client decision makers and solution architects leading enterprise transformation projects and wanting to gain further insight so that they can benefit from the integration of IBM software in large scale SAP projects IT architects and consultants integrating IBM technology with SAP solutions

[Batch Modernization on z/OS](#) Mike Ebbers,Elsie Ramos,Snehal Antani,Patrick Bruinsma,Manuel Mueller,Martin Packer,Christian Strauer,Sridhar Sudarsan,Susann Thomas,Andreas Wagner,Janet Wall,IBM Redbooks,2012-07-26 Mainframe computers play a central role in the daily operations of many of the

world's largest corporations and batch processing is a fundamental part of the workloads that run on the mainframe. A large portion of the workload on IBM z/OS systems is processed in batch mode. Although several IBM Redbooks publications discuss application modernization on the IBM z/OS platform, this book specifically addresses batch processing in detail. Many different technologies are available in a batch environment on z/OS systems. This book demonstrates these technologies and shows how the z/OS system offers a sophisticated environment for batch. In this practical book, we discuss a variety of themes that are of importance for batch workloads on z/OS systems and offer examples that you can try on your own system. The audience for this book includes IT architects and application developers with a focus on batch processing on the z/OS platform.

Observability For Legacy Systems Hyen Seuk Jeong, 2025-08-30. Become an expert in implementing observability methods for legacy technologies and discover how to use AIOps and OpenTelemetry to analyze root causes and solve problems in banking and telecommunications. Through this book, you will engage with issues that occur in kernels, networks, CPU, and IO by developing skills to handle traces and logs as well as Profiles, eBPF, and debugging. The real-world examples in the book will enable you to analyze and aggregate observability data, helping you gain competence in automating systems and resolving business-critical issues rapidly and efficiently. The book will introduce you to new observability approaches, describe different types of errors, and explain how observability addresses them. It will provide training on how to develop dashboards and charts and design a root cause analysis process. Emphasizing trace-centric observability, you will gain expertise in using EAI servers to integrate legacy tech and using extensions to complement the OpenTelemetry Agent. You will also understand the varied practical uses of OpenTelemetry through examples from multiple industries as well as an OpenTelemetry demo application. The book then takes you through infrastructure observability and infrastructure anomaly detection, enabling you to visualize and trace problems and helping you identify and proactively respond to anomalies in system resources. In the final chapters, you will learn how to aggregate and analyze observability data using Presto and Druid. Finally, you will familiarize yourself with AIOps and learn how to implement it with Langchain and RAGs. By the end of this book, you will be fully trained in the practical implementation of observability and using observability data to identify, analyze, and solve problems for large industries like finance and telecommunications.

What You Will Learn Integrate observability with legacy technology. Perform root cause analysis using observability platforms like OpenTelemetry. Analyze and aggregate observability data to solve business problems. Use AIOps and anomaly detection tools to automate operations and reduce costs.

Who This Book Is For System developers, data engineers, SREs, infrastructure engineers, system architects, Java developers, and DevOps engineers who are enthusiastic about observability and want to implement it with legacy technology.
