

# Calculus

## Calculus

The word "Calculus" comes from Latin meaning "small stones". Because it is like understanding something by looking at small pieces.

Differential Calculus cuts something into small pieces to find how it changes.

Integral Calculus joins (integrates) the small pieces together to find how much there is.

Limits

Limits are all about approaching. Sometimes you can't work something out directly, but you can see what it should be as you get closer and closer.

Approaching

Sometimes you can't work something out directly.... but you can see what it should be as you get closer and closer!

Let's use this function as an example:

$(x^2-1)(x-1)$

And let's work it out for  $x=1$ :

$$(1^2-1)(1-1) = (1-1)(1-1) = 0 \times 0$$

Now 0×0 is a difficulty! We don't really know the value of 0×0, so we need another way of answering this.

So instead of trying to work it out for  $x=1$  let's try approaching it closer and closer.

|          |                |
|----------|----------------|
| 0        | $(0^2-1)(0-1)$ |
| 0.5      | 1.562500       |
| 0.1      | 1.990000       |
| 0.01     | 1.999900       |
| 0.0001   | 1.999999       |
| 0.000001 | 1.9999999      |

Now we can see that as  $x$  gets closer to 1, then  $(x^2-1)(x-1)$  gets closer to 2.
