Cryptographic Hardware and Embedded Systems - CHES 2005 Josyula R. Rao, Berk Sunar, 2005-09-19 These are the proceedings of the 7th Workshop on Cryptographic Hardware and Embedded Systems CHES 2005 held in Edinburgh Scotland from August 29 to September 1 2005 Programming the PIC Microcontroller with MBASIC Jack

Smith, 2005-07-19 The Microchip PIC family of microcontrollers is the most popular series of microcontrollers in the world. However no microcontroller is of any use without software to make it perform useful functions. This comprehensive reference focuses on designing with Microchip's mid range PIC line using MBASIC a powerful but easy to learn programming language. It illustrates MBASIC's abilities through a series of design examples beginning with simple PIC based projects and proceeding through more advanced designs. Unlike other references however it also covers essential hardware and software design fundamentals of the PIC microcontroller series including programming in assembly language when needed to supplement the capabilities of MBASIC. Details of hardware software interfacing to the PIC are also provided. **BENEFIT TO THE READER** This book provides one of the most thorough introductions available to the world's most popular microcontroller with numerous hardware and software working design examples which engineers students and hobbyists can directly apply to their design work and studies. Using MBASIC it is possible to develop working programs for the PIC in a much shorter time frame than when using assembly language. Offers a complete introduction to programming the most popular microcontroller in the world using the MBASIC compiler from a company that is committed to supporting the book both through purchases and promotion. Provides numerous real world design examples all carefully tested.

MSP430-based Robot Applications Dan Harres, 2013-02-22 This book provides a careful explanation of the basic areas of electronics and computer architecture along with lots of examples to demonstrate the interface sensor design programming and microcontroller peripheral setup necessary for embedded systems development. With no need for mechanical knowledge of robots the book starts by demonstrating how to modify a simple radio controlled car to create a basic robot. The fundamental electronics of the MSP430 are described along with programming details in both C and assembly language and full explanations of ports timing and data acquisition. Further chapters cover inexpensive ways to perform circuit simulation and prototyping. Key features include: Thorough treatment of the MSP430's architecture and functionality along with detailed application specific guidance. Programming and the use of sensor technology to build an embedded system. A learn by doing experience. With this book you will learn: The basic theory for electronics design, Analog circuits, Digital logic, Computer arithmetic, Microcontroller programming, How to design and build a working robot, Assembly language and C programming, How to develop your own high performance embedded systems application using an on going robotics application. Teaches how to develop your own high performance embedded systems application using an on going robotics application.
