Modeling of Terrains and Volume Data Lidija Čomić,Leila De Floriani,Paola Magillo,Federico Iuricich,2014-10-27 This book describes the mathematical background behind discrete approaches to morphological analysis of scalar fields with a focus on Morse theory and on the discrete theories due to Banchoff and Forman The algorithms and data structures presented are used for terrain modeling and analysis molecular shape analysis and for analysis or visualization of sensor and simulation 3D data sets It covers a variety of application domains including geography geology environmental sciences medicine and biology The authors classify the different approaches to morphological analysis which are all based on the construction of Morse or Morse Smale decompositions They describe algorithms for computing such decompositions for both 2D and 3D scalar fields including those based on the discrete watershed transform Also addressed are recent developments in the research on morphological shape analysis such as simplification operators for Morse and Morse Smale complexes and their multi resolution representation Designed for professionals and researchers involved with modeling and algorithm

Optimal Surface Fitting of Point Clouds

Using Local Refinement Gaël Kermarrec,Vibeke Skytt,Tor Dokken,2022-12-14 This open access book provides insights into the novel Locally Refined B spline LR B spline surface format which is suited for representing terrain and seabed data in a compact way It provides an alternative to the well know raster and triangulated surface representations An LR B spline surface has an overall smooth behavior and allows the modeling of local details with only a limited growth in data volume In regions where many data points belong to the same smooth area LR B splines allow a very lean representation of the shape by locally adapting the resolution of the spline space to the size and local shape variations of the region The iterative method can be modified to improve the accuracy in particular domains of a point cloud The use of statistical information criterion can help determining the optimal threshold the number of iterations to perform as well as some parameters of the underlying mathematical functions degree of the splines parameter representation The resulting surfaces are well suited for analysis and computing secondary information such as contour curves and minimum and maximum points Also deformation analysis are potential applications of fitting point clouds with LR B splines
