Sunshine,1989-10-31 This is a book about the bricks and mortar from which are built those edifices that will permeate the emerging information society of the future computer networks For many years such computer networks have played an indirect role in our daily lives as the hidden servants of banks airlines and stores Now

they are becoming more visible as they enter our offices and homes and directly become part of our work entertainment and daily living The study of how computer networks function is a combined study of communication theory and computer science two disciplines appearing to have very little in common The modern communication scientist wishing to work in this area soon finds that solving the traditional problems of transmission modulation noise immunity and error bounds in getting the signal from one point to another is just the beginning of the challenge The communication must be in the right form to be routed properly to be handled without congestion and to be understood at various points in the network As for the computer scientist he finds that his discipline has also changed The fraction of computers that belong to networks is increasing all the time And for a typical single computer the fraction of its execution load storage occupancy and system management problems that are involved with being part of a network is also growing

**Hop Integrity in the Internet** Chin-Tser Huang,Mohamed G. Gouda,2006-05-24

Hop Integrity in the Internet introduces a new security defense hop integrity that can be used against denial of service attacks in the Internet If a message that is part of a denial of service attack is originated by an adversarial host in the Internet and if the message header includes a wrong address for the originating host in order to hide the true source of the attack then the message will be classified as modified or replayed and will be discarded by the first router that receives the message in the Internet A suite of protocols for providing hop integrity in the Internet is discussed in great detail In particular each protocol in the suite is specified and verified using an abstract and formal notation called the Secure Protocol Notation The protocols include Secure address resolution Weak hop integrity Strong hop integrity using soft sequence numbers Strong hop integrity using hard sequence numbers Other benefits of hop integrity extend to secure routing mobile IP and IP multicast
