On Hierarchical Models for Visual Recognition and Learning of Objects, Scenes, and Activities Jens Spehr,2014-11-13 In many computer vision applications objects have to be learned and recognized in images or image sequences This book presents new probabilistic hierarchical models that allow an efficient representation of multiple objects of different categories scales rotations and views The idea is to exploit similarities between objects and object parts in order to share calculations and avoid redundant information Furthermore inference approaches for fast and robust detection are presented These new approaches combine the idea of compositional and similarity hierarchies and overcome limitations of previous methods Besides classical object recognition the book shows the use for detection of human poses in a project for gait analysis The use of activity detection is presented for the design of environments for ageing to identify activities and behavior patterns in smart homes In a presented project for parking spot detection using an intelligent vehicle the proposed approaches are used to hierarchically model the environment of the vehicle for an efficient and robust interpretation of the scene in real time

Computer Vision -- ECCV 2010 Kostas Daniilidis, Petros Maragos, Nikos Paragios, 2010-09-08 The 2010 edition of the European Conference on Computer Vision was held in Heraklion Crete. The call for papers attracted an absolute record of 1 174 submissions. We describe here the selection of the accepted papers. Thirty eight area chairs were selected coming from Europe 18 USA and Canada 16 and Asia 4. Their selection was based on the following criteria 1 Researchers who had served at least two times as Area Chairs within the past two years at major vision conferences were excluded 2 Researchers who served as Area Chairs at the 2010 Computer Vision and Pattern Recognition were also excluded exception ECCV 2012 Program Chairs 3 Minimization of overlap introduced by Area Chairs being former student and advisors 4 20% of the Area Chairs had never served before in a major conference 5 The Area Chair selection process made all possible efforts to achieve a reasonable geographic distribution between countries thematic areas and trends in computer vision. Each Area Chair was assigned by the Program Chairs between 28 32 papers. Based on paper content the Area Chair recommended up to seven potential reviewers per paper. Such assignment was made using all reviewers in the database including the conflicting ones. The Program Chairs manually entered the missing conflict domains of approximately 300 reviewers. Based on the recommendation of the Area Chairs three reviewers were selected per paper with at least one being of the top three suggestions with 99
