Computer Networking and the Internet Fred Halsall, 2005

With the advent of the World Wide Web the global Internet has rapidly become the dominant type of computer network It now enables people around the world to use the Web for E Commerce and interactive entertainment applications in addition to e mail and IP telephony As a result the study of computer networking is now synonymous with the study of the Internet and its applications The 5th edition of this highly successful text has been completely revised to focus entirely on the Internet and so avoids the necessity of describing protocols and architectures that are no longer relevant As many Internet applications now involve multiple data types text images speech audio and video the book explains in detail how they are represented A number of different access networks are now used to gain access to the global Internet Separate chapters illustrate how each type of access network operates and this is followed by a detailed account of the architecture and protocols of the Internet itself and the operation of the major application protocols This body of knowledge is made accessible by extensive use of illustrations and worked examples that make complex systems more understandable at first glance This makes the book ideal for self study or classroom use for students in Computer Science or Engineering as well as being a comprehensive reference for practitioners who require a definitive guide to networking

Situational Awareness in Computer Network Defense: Principles, Methods and Applications

Onwubiko, Cyril, Owens, Thomas, 2012-01-31 This book

provides academia and organizations insights into practical and applied solutions frameworks technologies and implementations for situational awareness in computer networks Provided by publisher Large Scale Networks Radu Dobrescu,Florin Ionescu,2016-10-03 This book offers a rigorous analysis of the achievements in the field of traffic control in large networks oriented on two main aspects the self similarity in traffic behaviour and the scale free characteristic of a complex network Additionally the authors propose a new insight in understanding the inner nature of things and the cause and effect based on the identification of relationships and behaviours within a model which is based on the study of the influence of the topological characteristics of a network upon the traffic behaviour The effects of this influence are then discussed in order to find new solutions for traffic monitoring and diagnosis and also for traffic anomalies prediction Although these concepts are illustrated using highly accurate highly aggregated packet traces collected on backbone Internet links the results of the analysis can be applied for any complex network whose traffic processes exhibit asymptotic self similarity perceived as an adaptability of traffic in networks However the problem with self similar models is that they are computationally complex Their fitting procedure is very time consuming while their parameters cannot be estimated based on the on line measurements In this aim the main objective of this book is to discuss the problem of traffic prediction in the presence of self similarity and particularly to offer a possibility to forecast future traffic variations and to predict network performance as precisely as possible based on the measured traffic history
