Concepts And Values In Biodiversity Routledge Studies In Biodiversity Politics And Management:

Concepts and Values in Biodiversity Dirk Lanzerath, Minou Friese, 2014-01-23 Biodiversity may refer to the diversity of genes species or ecosystems in general. These varying concepts of biodiversity occasionally lead to conflicts among researchers and policy makers as each of them require a customized type of protection strategy. This book addresses the questions surrounding the merits of conserving an existing situation evolutionary development or the intentional substitution of one genome species or ecosystem for another. Any practical steps towards the protection of biodiversity demand a definition of that which is to be protected and in turn the motivations for protecting biodiversity. Is biodiversity a necessary model which is also useful or does it carry intrinsic value? Debates like this are particularly complex when interested parties address it from different conceptual and moral perspectives. Comprised of three parts each complemented by a short introductory paragraph this collection presents a variety of approaches to this challenge. The chapters cover the perspectives of environmental scientists with expertise in evolutionary environmental biology systematic zoology and botany as well as those of researchers with expertise in philosophy ethics politics law and economics. This combination facilitates a truly interdisciplinary debate by highlighting hitherto unacknowledged implications that inform current academic and political debates on biodiversity and its protection. The book should be of interest to students and researchers of environment studies biodiversity environmental philosophy ethics and management.

Mountains, Climate and Biodiversity

Mountains Climate and Biodiversity Carina Hoorn, Allison Perrigo, Alexandre Antonelli, 2018-02-22 Mountains Climate and Biodiversity A comprehensive and up to date synthesis for students and researchers. Mountains are topographically complex formations that play a fundamental role in regional and continental scale climates. They are also cradles to all major river systems and home to unique and often highly biodiverse and threatened ecosystems. But how do all these processes tie together to form the patterns of diversity we see today? Written by leading researchers in the fields of geology biology climate and geography this book explores the relationship between mountain building and climate change and how these processes shape biodiversity through time and space. In the first two sections you will learn about the processes theory and methods connecting mountain building and biodiversity. In the third section you will read compelling examples from around the world exploring the links between mountains climate and biodiversity. Throughout the 31 peer reviewed chapters a non technical style and synthetic illustrations make this book accessible to a wide audience. A comprehensive glossary summarises the main concepts and terminology. Readership Mountains Climate and Biodiversity is intended for students and researchers in geosciences biology and geography. It is specifically compiled for those who are interested in historical biogeography biodiversity and conservation.

Vegetation and Climate

Siegmar-W. Breckle, M. Daud Rafiqpoor, 2022-11-07

Vegetation soil and climate are the most important components of ecological systems. The book represents a compact synthesis of our current knowledge about the ecology of the Earth and is thus the basis for understanding the major interrelationships in a global perspective. In the first part with a rich endowment of illustrations and photographic material the well introduced book deals with the essential processes and operations on the Earth's surface that lead to the formation of the vegetation cover with its distinctive zonation. In the second part the individual vegetation zones as large scale ecosystems i.e. zonobiomes of the biosphere are consistently described comparatively according to certain criteria. In a short and compact form the main characteristics and structures as well as examples of ecosystem processes are discussed. The large scale ecosystems are at the same time the basis and reference system for all anthropogenic changes that have drastically altered the vegetation in the last millennia but especially in the 20th century. This book is a translation of the original German 1st edition *Vegetation und Klima* by Siegmar W Breckle and M Daud Rafiqpoor published by Springer Verlag GmbH Germany part of Springer Nature in 2019. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Global Biodiversity

T. Pullaiah, 2018-12-07

This is the first volume in the new multi volume set *Global Biodiversity*. Each volume in this series aims to provide insightful information on the biodiversity of selected nations in particular regions. The volumes summarize the available data on both wild and cultivated plants, wild and domesticated animals and microbes of the different nations. *Global Biodiversity Volume 1 Selected Countries in Asia* focuses on selected countries of Asia providing an abundance of biodiversity information on Afghanistan, Bangladesh, India, Indonesia, Iran, Iraq, Japan, Lebanon, Malaysia, Mongolia, Myanmar, Nepal and Vietnam. The first chapter in the volume provides an informative overview of what is biodiversity along with biogeographic classifications. It provides explanations of biodiversity patterns and species number, biodiversity conservation, protection and international commitments and cooperation, biodiversity threats and drivers of change such as human population growth, climate change, land use change and the economics of biodiversity as well.

Animal Biotechnology 2

Heiner Niemann, Christine Wrenzycki, 2018-08-01

This two volume textbook provides a comprehensive overview on the broad field of Animal Biotechnology with a special focus on livestock reproduction and breeding. The reader will be introduced to a variety of state of the art technologies and emerging genetic tools and their applications in animal production. Also ethics and legal aspects of animal biotechnology will be discussed and new trends and developments in the field will be critically assessed. The two volume work is a must have for graduate students advanced

undergraduates and researchers in the field of veterinary medicine genetics and animal biotechnology This second volume is dedicated to genetic tools in animal biotechnology such as somatic cloning transgenic technologies and the application of stem cells in livestock breeding Also ethics and legal aspects are discussed

The establishment of the Intergovernmental Platform on Biodiversity and Ecosystem Services IPBES points to the crucial role attributed to science and knowledge for the successful implementation of

biodiversity politics by both scientists and policy makers With the increased importance of biodiversity in international

politics and in part inspired by the success the Intergovernmental Panel on Climate Change IPCC has had in raising

awareness of global warming the call for an IPCC for Biodiversity was successful The Politics of Knowledge and Global

Biodiversity gives a full overview of the process of its implementation as finalised in 2013 and proposes an innovative

conceptual framework that puts this specific case into a more general perspective of international politics and relations It

provides a detailed empirical analysis of the knowledge politics associated with the establishment of IPBES and its

conceptual framework and methodological approach is grounded in a theoretical perspective This pioneering work is the first

to examine IPBES in this way and is essential reading for researchers and scholars of International Relations Environmental

Indigenous Knowledge & Development Monitor ,1993 Ethics in Biodiversity Conservation Patrik Baard,2021-11-28 This book examines the role of ethics and philosophy in biodiversity conservation The objective of this book is two fold on the one hand it offers a detailed and systematic account of central normative concepts often used but rarely explicated nor justified within conservation biology Such concepts include values both intrinsic instrumental and more recently relational rights and duties The second objective is to emphasize to environmental philosophers and applied ethicists the many interesting decision making challenges of biodiversity conservation The book argues that a nuanced account of instrumental values provides a powerful tool for reasoning about the values of biodiversity It also scrutinizes relational values the concept of rights of nature and risk and show how moral philosophy proves indispensable for these concepts Consequently it engages with recent suggestions on normative aspects of biodiversity conservation and show the need for moral philosophy in biodiversity conservation The overriding aim of this book is to provide conservation biologists and policy makers with a systematic overview of concepts and assessments of the reasons for reaching prescriptive conclusions about biodiversity conservation This will prove instrumental in clarifying the role of applied ethics and a refined understanding of the tools it can provide This title will be of interest to students and scholars of conservation biology conservation policy environmental ethics and environmental philosophy

The Routledge Handbook of Philosophy of Biodiversity Justin Garson,Anya Plutynski,Sahotra Sarkar,2016-10-04 Biological diversity or biodiversity is the degree of variation of life within an ecosystem It is a relatively new topic of study but has grown enormously in recent years Because of its interdisciplinary nature the very concept of biodiversity is the subject of debate amongst philosophers biologists geographers and environmentalists The Routledge Handbook of Philosophy of Biodiversity is an outstanding reference source to the key topics and debates in this exciting subject Comprising twenty three chapters by a team of international contributors the Handbook is divided into six parts Historical and sociological contexts focusing on the emergence of the term and early attempts to measure biodiversity What is biodiversity How should biodiversity be defined How can biodiversity include entities at the edge of its boundaries including microbial diversity and genetically engineered organisms Why protect biodiversity What can traditional

environmental ethics contribute to biodiversity Topics covered include anthropocentrism intrinsic value and ethical controversies surrounding the economics of biodiversity Measurement and methodology including decision theory and conservation the use of indicators for biodiversity and the changing use of genetics in biodiversity conservation Social contexts and global justice including conservation and community conflicts and biodiversity and cultural values Biodiversity and other environmental values How does biodiversity relate to other values like ecological restoration or ecological sustainability Essential reading for students and researchers in philosophy environmental science and environmental studies and conservation management it will also be extremely useful to those studying biodiversity in subjects such as biology and geography **Governing Biodiversity Through Democratic Deliberation** ,2015 *Environment & Planning* ,2010
