Sustainable Environmental Management: Lessons from

Indonesia Jatna Supriatna, Ralph Lenz, 2022-10-19 The climate change threat at present has reached a critical stage. The development of the world today is threatened as the whole world including Indonesia is facing three crises namely the economic crisis post COVID 19 Pandemic energy crisis caused by the war in Ukraine and lastly the climate crisis. Many world leaders are unaware of the severity of the threat of climate change which has now transformed into a climate crisis. The derivative of the climate crisis will not only contribute to worsening of the economic crisis and energy crisis but will quickly shift into a biodiversity catastrophe, drinking water scarcity and the global hunger crisis. In turn a political crisis might arise in the form of a denial of the government's authority which was deemed unable to overcome these crises. This bleak picture requires a thorough study and solution that is effective but at the same time reaches sustainability and penetrates the future. We are blessed to read Prof Jatna and Prof Lenz's Masterpiece Magnus Opus in the form of a book with more than 600 pages that relate to these problems and crises in a series of meanings. We should salute them for providing a clear and comprehensive picture of the interrelationships between regions, disciplines and elements both in terms of origin and the possibility of solving the problem. The presentation is presented comprehensively without letting go of the details and context regarding sustainability and the global picture. I am sure that many people especially those in a strong position can benefit and be given references from the essential things presented in this book. The great work of both authors which I am proud of Prof Rachmat Witoelar, Indonesia's President's Special Envoy for Climate Change 2015-2019 and advisor to I SER UI and CAIPSDCC. The concept of sustainable development is a development concept that ensures the fulfillment of the human needs of the present generation without compromising the ability of future generations to meet their needs. That is the idea of sustainable development emphasizes the development of technologies that can increase productivity and reduce the level of damage. The concept of sustainable development is an effort to integrate three aspects of life namely social, economic and environmental in a synergistic relationship supported by infrastructure and institutions. This concept is in line with the avoidance of shell game theory where shell game theory solves the problem by creating another problem. The book written by Prof Jatna Supriatna and his colleague Prof Ralph Lenz from the United States on environmentally sustainable development in Indonesia is very well written. It suits students, environmental experts, planning bureaucrats and legislature members. Plus those who are doing development planning both at home and abroad. Each environmental problem is described in detail and clarity and the solution options are given so that sound environmental management can be sustainable. Prof Satryo Brodjonegoro, President of Indonesian Academy of Sciences Indonesia is an archipelago country that harbors natural resources. It is among the countries with the most complete and extensive natural resource base perhaps trailing only Brazil. Still using natural resources as input for current production processes has increased yearly depletion. With its abundant natural resources Indonesia should have become a prosperous country from an economic perspective. But yearly rising levels of natural resource depletion in many regions of the country have occurred without an increase in equitable human welfare.

those words that I picked up from Prof Jatna Supriatna and his friend s book I support this book s aim that environmental sustainability is necessary for Indonesia This book should be read not only by students Environment NGOs and lecturers but also decision makers Dede Djuhana Ph D Dean of Faculty of Mathematics and Natural Sciences Universitas Indonesia

With welcome clarity of thought and expression analysis is made of the structural as well as cultural adaptations demanded of businesses in changing socioeconomic circumstances. Can an ethic be derived from the concept of sustainable development to be applied to the practice of business? Will the globalization of economic activity have a detrimental and decisive effect on the ability of business to bring about the vital progress needed? What are the implications of postmodern social theory with its emphasis on the uncertainty of value and commitment for corporations attempting to effect change? This third book in the comprehensive and authoritative Corporate Environmental Management series provides an ideal introduction to the main practical and theoretical issues for those new to the subject whilst those familiar with the series will find it a thoughtful and incisive development of the debate. Integrated Resource and Environmental Management D. Scott Slocombe, Kevin Stuart Hanna, 2007. The aim of this volume is to provide a coherent set of chapters that address major issues in resource and environmental management. The book has a North American focus with significant but not exclusive Canadian Content. Integration is the organizing theme of the volume. Integration as a concept meaning variously integration across disciplines across agencies and across sectors has been a key theme in the policy and management rhetoric of virtually every agency in North America and abroad for more than 30 years. As one of the dominant themes of the discipline, integration has been addressed both as a component and as the main focus of a variety of texts for this course. However, there is nothing on the market at the moment that is both up to date and North American in approach.

Environmental Management in Development Michael E. Colby, 1990. In the past quarter century environmental management has increasingly become a concern of governments. More recently the traditional split between developers and conservationists has begun to break down. Conceptions of what is economically and technologically practical, ecologically necessary and politically feasible are rapidly changing. This report discusses the implications of five paradigms of environmental management in development. The author notes that the remedial legalistic approach of environmental management is breaking down. Instead, interest in the more economically integrated approach of resource management has recently taken hold. Several interdependent forces indicate that improving the economic management of pollution and resources may be a necessary but insufficient measure to create the conditions for sustainable development. The perception of tradeoffs between development and environmental quality persists in the present debate but its necessity is greatly exaggerated according to this paper. Finally, it is noted that paradigms may be impervious to evidence and institutions and societies too difficult to change. Whether when and how these issues are resolved may be modern civilization's most significant test.
