The Innovative Bridge Design Handbook Construction Rehabilitation and Maintenance brings together the specific knowledge of a bevy of experts and academics in bridge engineering in the areas of design assessment research and construction. The handbook begins with an analysis of the history and development of bridge aesthetics and design. Various types of loads including seismic and wind loads are then described together with fatigue and fracture. Bridge design based on material such as reinforced concrete, prestressed reinforced concrete, steel and composite timber masonry bridges is analyzed and detailed according to international codes and standards. Then bridge design based on geometry such as arch bridges, girders, cable stayed and suspension bridges is illustrated. This is followed by a discussion of a number of special topics including integral, movable, highway and railway bridges together with seismic component devices, cables, orthotropic decks, foundations and case studies. Finally bridge construction equipment, bridge assessment, retrofit and management, bridge monitoring, fiber reinforced polymers to reinforce bridges, bridge collapse issues are covered. Loads including seismic and wind loads, fatigue and fracture, local effects, Structural analysis including numerical methods, FEM, dynamics, risk and reliability, innovative structural typologies. Bridge design based on material type RC and PRC, steel and composite timber and masonry bridges. Bridge design based on geometry arch bridges, girders, cable stayed and suspension bridges. Special topics integral, movable, highway, railway bridges, seismic component devices, cables, orthotropic decks, foundations. Construction including construction case studies, construction equipment, bridge assessment, bridge management, retrofit and strengthening, monitoring procedures. **Concrete Bridge Designer's Manual** E.
