Concrete is the most widely used man made product in the world and is second only to water as the world's most utilized substance. It is an affordable and reliable material that is applied throughout the infrastructure of any nation's construction, industrial, transportation, defence, utility and residential sectors. In its simplest form, it is a mixture of cement paste and aggregates. For producing quality concrete, not only good quality ingredients are necessary, but good rules in manufacturing concrete are also essential. The quality of the ingredients is always judged in the laboratory by performing various tests on them by following standard procedures. It covers different methods including ultrasonic testing, infrared thermography, rebound hammer testing, impact echo testing, and ground penetrating radar. The book emphasizes a hands-on approach with each technique accompanied by clear diagrams and photographs. Readers will learn how to prepare concrete samples, operate the testing equipment, interpret test results, and draw conclusions about the structural health of concrete elements. Furthermore, the laboratory manual highlights essential considerations such as safety precautions, limitations of each method, and factors that may affect test results. It also discusses the significance of NDT in assessing durability, detecting defects, and guiding repair and maintenance strategies for concrete structures. Non Destructive Testing on Concrete Structures Laboratory Manual serves as an invaluable resource for civil engineering students, researchers, and professionals working in the construction and infrastructure industries. It equips readers with the necessary knowledge and practical skills to effectively utilize NDT techniques and make informed decisions regarding the condition of concrete structures.
