the International IFIP WG 5.7 Conference on Advances in Production Management Systems APMS 2016 held in Iguassu Falls Brazil in September 2016. The 117 revised full papers were carefully reviewed and selected from 164 submissions. They are organized in the following topical sections: computational intelligence in production management; intelligent manufacturing systems; knowledge based PLM; modelling of business and operational processes; virtual digital and smart factory; flexible sustainable supply chains; large scale supply chains; sustainable manufacturing; quality in production management; collaborative systems; innovation and collaborative networks; agrifood supply chains; production economics; lean manufacturing; cyber physical technology; deployments in smart manufacturing systems; smart manufacturing system characterization; knowledge management in production systems; service oriented architecture for smart manufacturing systems; advances in cleaner production; sustainable production management and operations management in engineer to order manufacturing.

Performance Modeling and Design of Computer Systems Mor Harchol-Balter, 2013-02-18 Tackling the questions that systems designers care about, this book brings queueing theory decisively back to computer science. The book is written with computer scientists and engineers in mind and is full of examples from computer systems as well as manufacturing and operations research. Fun and readable, the book is highly approachable even for undergraduates while still being thoroughly rigorous and also covering a much wider span of topics than many queueing books. Readers benefit from a lively mix of motivation and intuition with illustrations, examples, and more than 300 exercises, all while acquiring the skills needed to model, analyze, and design large scale systems with good performance and low cost. The exercises are an important feature, teaching research level counterintuitive lessons in the design of computer systems. The goal is to train readers not only to customize existing analyses but also to invent their own.

Operating System Concepts Abraham Silberschatz, Peter B. Galvin, Greg Gagne, 2005 This new seventh edition of the book has been brought up to date to include recent developments in operating systems such as Windows XP and the new small footprint operating systems that work in hand held devices such as the Palm and in cell phones. Most of the book is on general purpose operating systems such as Linux and those from Microsoft. But at the end of the book there are chapters on other types of operating systems such as Real Time Operating Systems and MultiMedia OS's. Finally there are some chapters which the authors call case studies. In these one chapter goes into a detailed discussion of Linux, another chapter covers Windows XP. Chapter 23 covers several early operating systems that helped to define the features that make up modern OS's. These include Atlas, XDS 940, THE, RC 4000, CTSS, MULTICS, OS 360, and MACH, along with brief mentions of several others. Note that this is not a book on how to use operating systems; this is a book on how operating systems are designed. It is intended for upper level undergraduate students or first year graduate students.

Computer Networks Natalia Olifer, Victor Olifer, 2006 This is a comprehensive guide covering both the theory of basic networking technologies as well as practical solutions to networking problems.
