resources toward ethical issues in technology is in no small part the result of the work of Simon Rogerson Chuck Huff Professor of Social Psychology at Saint Olaf College Northfield Minnesota In 1995 Apple launched its first WWW server Quick Time On line It was the year Microsoft released Internet Explorer and sold 7 million copies of Windows 95 in just 2 months In March 1995 the author Simon Rogerson opened the first ETHICOMP conference with these words We live in a turbulent society where there is social political economic and technological turbulence it is causing a vast amount of restructuring within all these organisations which impacts on individuals which impacts on the way departments are set up organisational hierarchies job content span of control social interaction and so on and so forth Information is very much the fuel of modern technological change Almost anything now can be represented by the technology and transported to somewhere else It s a situation where the more information a computer can process the more of the world it can actually turn into information That may well be very exciting but it is also very concerning That could be describing today More than 25 years later these issues are still at the forefront of how ethical digital technology can be developed and utilised This book is an anthology of the author s work over the past 25 years of pioneering research in digital ethics It is structured into five themes Journey Process Product Future and Education Each theme commences with an introductory explanation of the papers their relevance and their interrelationship The anthology finishes with a concluding chapter which summarises the key messages and suggests what might happen in the future Included in this chapter are insights from some younger leading academics who are part of the community charged with ensuring that ethical digital technology is realised   *Morality and Machines* Stacey L. Ethical and Social Issues in the Information Age Joseph Migga Kizza,2007-07-05 viii As we look for such a strategy technological development races on with new technologies that make our efforts and existing technologies on which they are based obsolete in shorter and shorter periods For example when I started to write the first edition in 1996 computer networking and associated computer network security were not big the Internet and associated d coms were yet to become commercialized and associated with big money and mass global computer network attacks like Malissa Love Boy and Distributed Denial of Services DDOS were unknown All these illustrate the speed at which the computing environment is changing and demonstrate a need for continuous review of the computer s ence education in both content and pedagogy So the focus in this edition is to address those changes In this edition I have made major changes in some of the chapters reorganized others and added new ones to bring the book update with current issues   **Computers and Society** Ronald M. Baecker,2019-04-24 The last century has seen enormous leaps in the development of digital technologies and most aspects of modern life have changed significantly with their widespread availability and use Technology at various scales supercomputers corporate networks desktop and laptop computers the internet tablets mobile phones and processors that are hidden in everyday devices and are so small you can barely see them with the naked eye all pervade our world in a major way Computers and Society Modern Perspectives is a wide ranging and comprehensive textbook that critically assesses the

global technical achievements in digital technologies and how are they are applied in media education and learning medicine and health free speech democracy and government and war and peace Ronald M Baecker reviews critical ethical issues raised by computers such as digital inclusion security safety privacy automation and work and discusses social political and ethical controversies and choices now faced by society Particular attention is paid to new and exciting developments in artificial intelligence and machine learning and the issues that have arisen from our complex relationship with AI   *A Gift of Fire* Sara Baase,Timothy Henry,2018 For courses in Computer Ethics and Computers and Society An objective study of technology ethics that inspires critical thinking and debate In Gift of Fire A Social Legal and Ethical Issues for Computing Technology Sara Baase presents a balanced exploration of the social legal philosophical ethical political constitutional and economic implications of computing and the controversies they raise With an objective computer scientist s perspective and with historical context for many issues Baase covers the issues readers will face both as members of a technological society and as professionals in computer related fields A primary goal is to develop computer professionals who understand the implications of what they create and how it fits into society at large This text encourages readers to think about the ethics and philosophical direction behind topics but doesn t them lead students to conclusions The 5th Edition contains updated material on new topics and examples outdated material has been removed and several topics have been reorganized New material appears throughout including material on current trending topics such as drones and autonomous cars
